QUESTION 1

You need to integrate CA Process Automation with an external application. A data value or status change in the application will result in a CA Process Automation process starting, continuing, or stopping. Which approach enables you to minimize any potential impact on performance?

- A. Send an email into a mailbox monitored by a CA Process Automation mail trigger.
- B. Continuously poll the external application from the CA Process Automation process to ascertain if data values or statuses in its database change.
- C. Continuously check for a predefined file that the external application will be configured to create in a commonly accessible file system when data values or statuses change.
- D. Send an event to CA Process Automation from the external application when data values or statuses change with a data payload, which will start, continue, or stop the execution of a designated CA Process Automation process.

Correct Answer: D

QUESTION 2

Which data types can you use for dataset variables? (Choose three)

- A. Char
- B. String
- C. Double
- D. ValueMap
- E. XML Fragment

Correct Answer: BCD

QUESTION 3

The mail server for email notifications can be configured for all operators and processes by:

- A. Setting the hostname variable.
- B. Setting the outgoing mail server in Outlook.
- C. Defining an SMTPServer variable within your process.
- D. Modifying the SMTP Server for Outgoing e-mail setting in the Email module for the domain.

Correct Answer: D

QUESTION 4

You use the Monitor Event operator to:

- A. Configure a process to wait for an SNMP trap event.
- B. Publish an event to an orchestrator before continuing down a path of execution.
- C. Configure a process to wait for one or more events published to an orchestrator before continuing down a path of execution.
- D. Configure a process to wait for one or more events published to an external application before continuing down a path of execution.

Correct Answer: C

QUESTION 5

You have installed a CA Process Automation agent on a host. Now you want to associate the current environment with the agent host. To do this, you need to configure:

- A. A module.
- B. A touch point.
- C. The domain orchestrator.
- D. CA Embedded Entitlements Manager (CA EEM).

Correct Answer: B
