QUESTION 1

Exit links from an And operator are activated only after:

- A. Any entry link to the And operator has been activated.
- B. All entry links to the And operator have been activated.
- C. The first entry link to the And operator has been activated.
- D. The first and second entry links to the And operator have been activated.

Correct Answer: B

QUESTION 2

You need to install a secondary worker node for a domain orchestrator in a cluster installation. To accomplish this, what do you need to do?

- A. Install an agent and set up a touchpoint.
- B. Download the CA Process Automation Cluster Node install ISO image from support.ca .com.
- C. Log in to CA Embedded Entitlements Manager (CA EEM), click Configure, and select Install Cluster Node for Domain Orchestrator.
- D. Log in to the primary domain orchestrator, click the Configuration tab, and in the Installation palette, click the Install button next to the Install Cluster Node for Domain Orchestrator option.

Correct Answer: D

QUESTION 3

You want to break down large processes into smaller sections to increase readability. You also want the ability to define rules that are triggered when processing moves between these sections. Which CA Process Automation feature provides the functionality you require?

- A. Boundaries
- B. Swim lanes
- C. Limit dividers
- D. Highway lanes

Correct Answer: B

QUESTION 4

When you import a process object, CA Process Automation:

- A. Reverts to the last baseline of the imported object.
- B. Enables you to select import options on the Configuration tab.
- C. Creates a version of the object that enables you to select and edit any past versions of the process.
- D. Creates a version of the object in the library that incorporates any changes you made to the process instance before the export.

Correct Answer: D

QUESTION 5

Because a host in your environment contains social security numbers, you need to restrict access to a small high-privilege group. You have been asked to investigate and implement the touchpoint security feature of CA Process Automation. To help ensure a successful touchpoint security implementation, which factor do you need to consider?

- A. It is an orchestrator-level property that can be enforced at the orchestrator level only.
- B. The default inherited enforcement ensures non-secure processes only run if you disable touch point security.
- C. Even if you enforce it, it will not function unless you also configure a CA Embedded Entitlements Manager (CA EEM) policy.
- D. For touch point security policies, best practice is to directly name the operators that act on touchpoints you want to secure.

Correct Answer: C
