- A. There are too many members or levels nested on the row edge.
- B. Filtering on measure values is incompatible with an OLAP data source.
- C. Limiting the crosstab measures with a filter function.

**QUESTION 2**

- A. The aggregate function can only summarize within a set, and the total function can accept separate members.
- B. The aggregate function is dimensional, and the total function is relational.
- C. The aggregate function will summarize only the currentMeasure, and the total function will summarize any specified measure.
- D. The aggregate function follows the rollup rules of the measure defined in the data source, and the total function adds the total of the specified measure.
