QUESTION 1

An international enterprise has planners in European, Asian, and North American regions. The enterprise wants to have planners in each region enter cube data into the local regional TM1 server but report globally on a daily basis from a single enterprise-reporting server located in Canada. The enterprise wants to integrate the cube data from the different regions into a single reporting server in Canada.

Which method accomplishes this goal?

A. Use the TM1 rules to push data from each regional server into the Canadian reporting server.

B. Use the TM1 rules to pull data from each regional server into the Canadian reporting server.

C. UsetheTM1 replication/synchronization in the Canadian server to pull data from the regional servers.

D. Use the TM1 replication/synchronization in the regional servers to push data to the Canadian server.

Correct Answer: C

QUESTION 2

You want to load data to Cube A that will result in faster load times while ensuring TM1 can recover the content of the data load in the event of a subsequent server failure.

Which technique would you use?
