QUESTION 1

A user in the human resource (HR) department has reported slow response time to the company personnel database when trying to process new hires to the company. The administrator reviews the department VMs and resource pools to determine the cause of the slow access. The memory and CPU for the host machines in this resource pool have recently been upgraded. Other HR users that do not access the database are not reporting any problems. Which of the following is the cause of the slow response time?

- A. NIC failure
- B. Disk latency
- C. Bandwidth throttling
- D. CPU wait time

Correct Answer: B

QUESTION 2

The corporate security department is recommending that the administrator deploys Type I hypervisor versus Type II. Which of the following is a security concern in regards to deploying a Type II hypervisor?

- A. Human error
- B. Performance benchmarks
- C. Additional software
- D. Administration time

Correct Answer: C

QUESTION 3

Which of the following is true about a Type II hypervisor?

- A. It requires a primary hypervisor to function properly.
- B. It implements stronger security controls than a Type I supervisor at the same patch level.
- C. It provides slower performance than a Type I hypervisor installed on the same hardware.
- D. It provides direct hardware access through the use of specialized drivers.

Correct Answer: C

QUESTION 4

In which of the following situations would a network administrator use TCP port 3389?

- A. The network administrator is in the datacenter and next to the KVM switch
- B. The network administrator needs to access a server at a separate location
- C. The network administrator is working on a failed server and replacing hard drives
- D. The server is down and the network administrator is not able to connect to the server

Correct Answer: B

QUESTION 5

Anne, an administrator, receives an alert indicating a disk failure on a highly available server with a local RAID 5 array. When checking the server, Anne confirms a flashing amber light on one of the disks. Which of the following is the correct procedure for replacing this drive?

- A. Remove the old drive, reboot the server, and access the RAID controller. Rebuild the array to RAID 6, and then add the new drive for parity.
- B. Remove the old disk while the server is powered on and operational and replace with a new drive.
- C. Remove the old drive, reboot the server, and access the RAID controller. Rebuild the array to RAID 1, and then add the new drive for parity.
- D. Power off the server and replace with a new drive.

Correct Answer: B
