QUESTION 1

Identify the correct statement(s) regarding the following pointcut: execution (@com.springsource.MyCustomAnnotation void *(..))

- A. Spring does not support annotations inside its pointcut expression language
- B. This will select join points representing void methods that are annotated by @com.springsource.MyCustomAnnotation
- C. This will select join points representing methods that may have a public, protected or default visibility
- D. This pointcut will in no situation ever be able to select any join points

Correct Answer: B

QUESTION 2

Which of the following statements best describes the benefits of using the Spring Framework with respect to unit testing? (Select one)

- A. Your Java code typically has dependencies on Spring Framework classes which are designed to make the job of unit testing easier
- B. The Spring Framework encourages you to program to interfaces which makes it easier to stub or mock out dependencies in your code
- C. The extensive runtime checks performed by the ApplicationContext when it initializes make traditional unit testing less important
- D. All of the above

Correct Answer: B

QUESTION 3

Which of the following statements about Spring's JUnit integration testing support is true? (select one)

- A. A new ApplicationContext is initialized and created for each test method
- B. To obtain references to the Spring bean(s) you want to test, you need to call getBean() on the ApplicationContext provided
- C. You can indicate which XML configuration files the test class will use to create the ApplicationContext
- D. All of the above

Correct Answer: C

QUESTION 4

Method level security can be configured using which of the following mechanisms? (select one)

- A. Using the @Secured annotation on methods to be secured
- B. Using the @RolesAllowed annotation on methods to be secured
- C. Configuring using a pointcut expression in Spring XML configuration file
- D. All of the above

Correct Answer: D

QUESTION 5

Which of the following statements is true concerning configuring JMS Resources with Spring? (Select one)

- A. Spring cannot use a standalone JMS provider
- B. Spring can use the JMS resources provided by an application server
- C. The ConnectionFactory cannot be standalone
- D. The ConnectionFactory cannot be retrieved from JNDI

Correct Answer: B
