QUESTION 1

What is a characteristic of EMC NetWorker deduplication with Avamar?

- A. Identifies and stores only unique, variable-sized, subfile data objects
- B. Uses target-based deduplication
- C. Uses file-based deduplication
- D. Identifies and stores only unique, fixed-sized, metafile data objects

Correct Answer: A

QUESTION 2

A backup administrator wants to leverage the replication feature available on the storage array as an alternate source for backups. What is an advantage of this approach?

- A. Removes the burden on the production LUNs during backup
- B. Improves RPO
- C. Enables backups to be performed without a storage node
- D. Decreases storage utilization

Correct Answer: A

QUESTION 3

What is the purpose of NDMP?

- A. Provides a standard protocol for backup and recovery operations of network-attached devices
- B. Enables components from different vendors to coexist in the same network
- C. Manages the flow of backup data from different host operating systems and hardware platforms
- D. Reduces traffic congestion on a network by controlling the data flow

Correct Answer: A

QUESTION 4

A backup administrator wants to leverage the replication feature available on the storage array as an alternate source for backups. What is an advantage of this approach?

- A. Improves RPO

- B. Enables backups to be performed without a storage node
- C. Allows off-host backups to be performed
- D. Decreases storage utilization

Correct Answer: C

QUESTION 5

What is the maximum fault tolerance of RAID 6, where n is the number of disks?

- A. n-2
- B. 1
- C. n-1
- D. 2

Correct Answer: D
