QUESTION 1

After purchasing a deduplication solution a customer has had an unexpected growth in data. With limited funds to expand their current storage, they decide to back up only files that would provide the best deduplication.

What type of data files should be backed up?

A. Uncompressed files

B. Compressed files

C. Encrypted files

D. Media files

Correct Answer: A

QUESTION 2

You need to copy Oracle data from a development server running Windows to a test server running Linux. How is this done?

A. Oracle online backup

B. Oracle offline backup

C. Linux dd command

D. Database export

Correct Answer: D

QUESTION 3

Laptop backups are performed during the day. The backup administrator notices that there are latency issues when host applications on the SAN are accessed. Outside of the backup window, performance is as expected.

What is the most likely cause for the latency during backups?

A. Buffer overflows

B. Network congestion

C. Duplex mismatches

D. Physical link errors

Correct Answer: B

QUESTION 4

What defines a point-in-time replica?

A. The data on the replica that is synchronized with the production data at all times.

B. A partial copy of the production data that is synchronized at some specific timestamp.

C. A full copy of the production data that is synchronized at all times.

D. The data in the replica that is an identical image of production at some specific timestamp.

Correct Answer: D

QUESTION 5

What is the primary reason for having disaster recovery backups?

A. To restore data from an alternate site due to data loss at a primary site

B. To restore data when data loss or logical corruptions occur during routine processing

C. To restore data that was archived for regulatory compliance

D. To restore data when data loss occurs due to minor hardware component failures

Correct Answer: A
