QUESTION 1

You have been assigned to do a study of the daily revenue effect of a pricing model of online transactions. You have tested all the theoretical models in the previous model planning stage, and all tests have yielded statistically insignificant results. What is your next step?

A. Report that the results are insignificant, and reevaluate the original business question.

B. Run all the models again against a larger sample, leveraging more historical data.

C. Move forward on the model with the highest significance scores relative to the others.

D. Modify samples used by the models and iterate until a significant result occurs.

Correct Answer: A

QUESTION 2

When would you prefer a Naive Bayes model to a logistic regression model for classification?

A. When you are using several categorical input variables with over 1000 possible values each.

B. When you need to estimate the probability of an outcome, not just which class it is in.

C. When all the input variables are numerical.

D. When some of the input variables might be correlated.

Correct Answer: A

QUESTION 3

What does the R code

z
