QUESTION 1

You need to survey an existing application environment to free up resources. Which type of systems should you initially identify?

- A. Those that can be combined, replaced, or obsoleted
- B. Those whose data can be comingled
- C. Those that have minimal GRC or security requirements
- D. Those that can be migrated easily to a virtual environment

Correct Answer: A

QUESTION 2

A company has five heterogeneous storage arrays that are all connected to a common SAN environment.

They want to offer storage to their end users, masking the identity of the target storage so the users cannot tell which storage system they are using.

Which virtualization technique would work in this environment?

- A. Distributed virtualization
- B. Block-level storage virtualization
- C. Hadoop HDFS
- D. File-level storage virtualization

Correct Answer: B

QUESTION 3

A company has virtualized all their non-mission critical applications and many of their mission critical applications. They now want to convert those virtualized silos that are still owned by the lines of business into a true VDC.

What is an important technical capability gained from doing this?

- A. Provisioning time is reduced by deploying standard services
- B. A multi-tenant environment can be leveraged to deploy custom services
- C. The data center is ready to deploy cloud services
- D. Energy consumption is cut dramatically due to increased consolidation

Correct Answer: A

QUESTION 4

A software manufacturer is planning to convert their VDC to IaaS. As part of the transformation to IaaS the company realizes they have to make several organizational changes.

Which is the most likely starting point for their organizational transformation?

- A. Cross train IT operations and delivery personnel
- B. Create new service based roles in the lines of business
- C. Align GRC and Trust requirements
- D. Obtain executive and organizational buy-in

Correct Answer: D

QUESTION 5

From an IT business layer perspective, what do you gain by consolidating at the application layer?

- A. Reduced transactional storage
- B. Reduced footprint
- C. Inter-array tiering
- D. Increased compute power

Correct Answer: B
