QUESTION 1

You are deploying a virtualized application in a high-availability configuration with automated VM restart on a hypervisor cluster. Your sizing estimates show that peak workloads will saturate the processing power of four hypervisor servers. To meet the SLA, N+2 redundancy is required on the hypervisor servers, with server utilization not to exceed 80% under any conditions.

What is the minimum number of nodes that you should configure in the hypervisor cluster?

- A. 5
- B. 6
- C. 7
- D. 8

Correct Answer: C

QUESTION 2

A company wants to ensure that their critical application can fail over to another physical host within the cluster without disruption.

Which feature should be utilized?

- A. Online Migration
- B. High Availability
- C. Fault Tolerance
- D. Resource Pooling

Correct Answer: C

QUESTION 3

Why is there a need for a full risk assessment if a quick risk assessment has already been performed?

- A. A full assessment can help find operational exposures after implementation
- B. A full assessment is usually conducted by a third party to get an unbiased version of the risk profile
- C. A full assessment details all the exposures in high value/high risk assets
- D. A full assessment is always executed by internal auditing

Correct Answer: C

QUESTION 4

A criminal act is committed by one of the tenants in a multi-tenant environment where customer data also resides.

What would be a key design recommendation to minimize risk of exposure to the customer data in this situation?

- A. Sufficient data isolation
- B. Physically separate storage
- C. Physically separate servers
- D. Restrictive file permissions

Correct Answer: A

QUESTION 5

An application is used by nearly all the employees in an organization to place and track orders, provide customer support, maintain and report on financials, and track product defects.

The application was written by the organization's IT Department 10 years ago. The IT staff actively maintains it and adds features on a regular basis.

What is this an example of?

- A. Vendor lock-in
- B. A legacy application
- C. An enterprise application
- D. Service-oriented architecture

Correct Answer: C
