QUESTION 1

A customer's database resides on a RAID 5 Pool with SAS drives. Which best practice should be followed to optimize Reserved LUN Pool disk performance?

- A. Use equal size thin LUNs from the same Pool as the database
- B. Use a mix of both SAS and NL-SAS disks from the same Pool as the database
- C. Use only SAS disks on dedicated RAID Groups
- D. Use only NL-SAS II drives on dedicated RAID Groups

Correct Answer: A

QUESTION 2

Your customer is designing a Proof of Concept with SQL Server attached to a VNX. The storage design includes seven LUNs on a RAID Group. The system is generally very heavily loaded, with a particularly high load on the cache. This is a very carefully controlled environment and your customer has asked for assistance in planning the layout of the LUN location on the physical spindles.

Where in the RAID Group would you recommend placing the two heavily used LUNs if the physical spindle is fully utilized?

- A. Adjacent to each other in the middle
- B. One at beginning and one at the end
- C. Adjacent to each other at the beginning
- D. Evenly placed, as non-adjacent as possible

Correct Answer: A

QUESTION 3

Your customer is reporting less than optimal performance for their online payment processing application. The payment processing application is running on a Windows Server cluster with the back-end Oracle databases running on Oracle Enterprise Linux (OEL). Both the application and database environments have been presented storage from the customer's VNX solution.

Which tool is best suited to identify performance issues on the application servers?

- A. Perfmon
- B. Oracle Statspack
- C. Workload Analyzer
- D. IOSTAT

Correct Answer: A

QUESTION 4

A customer is running a data warehouse server with dual HBAs connected to a SAN . A performance analysis of the server shows high utilization. This server needs to be backed up to a SAN-attached backup device. The customer is concerned about production performance while backing up the data.

Which solution should be proposed?

- A. Back up the data over a LAN
- B. Perform disk-based backup
- C. Use clones as the backup source
- D. Use direct-attached tape-based backup

Correct Answer: B

QUESTION 5

Which navisecli performance counter is used to view stripe boundary crossing statistics?

- A. getdisk
- B. getcontrol
- C. getrg
- D. getlun

Correct Answer: D
