QUESTION 1

You work as a Web Application Developer for SunInfo Inc. The company uses Visual Studio 2008 as its application development platform. You create a Windows Forms application using .NET Framework 3.5. You want to create a default event handler for an event in the designer. Which of the following steps will you take to accomplish the task?

Each correct answer represents a part of the solution. Choose all that apply.

- A. In the designer, select the control. In the Properties window, click the lightning bolt button to display the list of events that the control can raise.
- B. In the Code Editor, create a method with a signature that is the same as the signature of the event that you want to handle.
- C. Double-click the entry for the event to create the default event handler. This creates the method with the proper signature, and the Code Editor opens to the new method.
- D. Add the code that you want to execute to the new method when the event is raised.

Correct Answer: ACD

QUESTION 2

Ricky works as a Software Developer for SoftTech Inc. He creates an XML Web service, named XmlWeb, by using Visual Studio .NET. He wants to publish XmlWeb within the company's intranet. Which of the following actions will Ricky take to publish XmlWeb?

Each correct answer represents a part of the solution. Choose all that apply.

- A. Register XmlWeb in the private UDDI registry.
- B. Use XML Spy to register XmlWeb.
- C. Register XmlWeb in the public UDDI registry.
- D. Build a discovery (disco) document for XmlWeb.

Correct Answer: AD

QUESTION 3

You work as a Web Application Developer for SunInfo Inc. The company uses Visual Studio 2008 as its application development platform. You create a Web application using .NET Framework 3.5. Your application has a form that accepts a user name and email address. You want to validate the input text for the email address by matching against a pattern defined in the regular expression.

Which of the following validation controls will you use to accomplish the task?

- A. RegularExpressionValidator
- B. RangeValidator

C. CompareValidator

D. RequiredFieldValidator

Correct Answer: A

QUESTION 4

You work as a Web Application Developer for SunInfo Inc. The company uses Visual Studio 2008 as its application development platform. You create a Web application using .NET Framework 3.5. You want to ensure that when an unhandled exception occurs on the site, a custom error page `errorpage.aspx` is displayed. Also, you want to ensure that when the HTTP 500 error occurs, the `servererror.aspx` page is displayed. Which of the following settings will you add inside the `system.web` section of the `Web.config` file to accomplish the task?

A.

B.

C.

D.

Correct Answer: B

QUESTION 5

You work as a Software Developer for ManSoft Inc. The company uses Visual Studio .NET as its application development platform. You create an application named `MyRandomGen`. You use the `System.Security.Cryptography` namespace. You want to create a code that randomly rolls the dice fifty times and displays the results on the screen. Which of the following code segments will you use to accomplish this task?

A. `for(int x = 0; x`
