QUESTION 1

You work as a Windows Application Developer for ABC Inc. The company uses Visual Studio .NET 2008 as its application development platform. You have recently finished development of a Windows Forms application using .NET Framework 3.5. You have written complex foreach loops to retrieve data from collections. However, you want to modify the application, so that it uses LINQ queries in place of foreach loops. What will be the advantages of using LINQ queries instead of foreach loops?

Each correct answer represents a part of the solution. Choose all that apply.

- A. They provide powerful filtering, ordering, and grouping capabilities with least application code.
- B. They can be ported to other data sources with slight or no alteration.
- C. They provide lambda expression in the form of an expression tree.
- D. They are more concise and readable, particularly when filtering multiple conditions.

Correct Answer: ABD

QUESTION 2

You work as a Software Developer for ManSoft Inc. The company uses Visual Studio.NET 2005 as its application development platform. The company wants you to develop an application that implements a dynamic data structure for storing valuable data of different types (String, Integer, etc). You develop the application and implement the generic dynamic data structure that can be increased or decreased as and when required. You want to read the data from the data structure. Which of the following enumerators will you use to accomplish the task?

- A. LinkedList.Enumerator
- B. Stack.Enumerator
- C. Queue.Enumerator
- D. List.Enumerator

Correct Answer: A

QUESTION 3

You work as a Software Developer for ABC Inc. The company has several branches worldwide. The company uses Visual Studio .NET 2005 as its application development platform. You have received a file in ASCII encoded from one of the company's branches. Therefore, you are required to decode the file encoded in ACSII. Which of the following decoding types will you use to get the correct results?

Each correct answer represents a complete solution. Choose two.

- A. UTF-32
- B. UTF-16

- C. UTF-7
- D. UTF-8

Correct Answer: CD

QUESTION 4

You work as a Software Developer for ABC Inc. The company uses Visual Studio .NET 2008 as its application development platform. You are creating an ASP.NET Web application using .NET Framework 3.5. The application can be run only by a specific set of user credentials. Therefore, other applications are not permitted to employ these user credentials. The ASP.NET application uses asymmetric encryption to encrypt and decrypt messages to other servers. You are required to shield the private key that is used to encrypt and decrypt messages that are accessed by other users or applications on the same server. What will you do to accomplish the task?

- A. Use the Triple Data Encryption Standard algorithm to encrypt the key.
- B. Use the Secure Sockets Layer protocol.
- C. Use the DataProtectionPermission class.
- D. Use the ProtectedData class.
- E. Store the private key in the App_Data directory.

Correct Answer: D

QUESTION 5

John works as a Web Developer for Bitsoft Inc. He creates an ASP.NET application, named MyApp1, by using Visual Studio .Net for a University Web site. Students will use MyApp1 to view their term end result. MyApp1 contains an ASP.NET page named, named Page1. Page1 contains a TextBox control, named txtEnrolmentNo, and two Button controls, named btnSubmit and btnCancel respectively.

John wants that if a user tries to submit the page by clicking the Submit button without entering his enrolment the word "Required" appears next to txtEnrolmentNo. However, when a user clicks the Cancel button he is redirected to a new page, named PageCancel.aspx. To accomplish this he adds a RequiredFieldValidator control to the page and sets its ControlToValidate and ErrorMessage properties to txtEnrolmentNo and "Required" respectively. However, when he executes the application he finds that the validation check is also performed on clicking the Cancel button. What is the most likely cause of the issue?

- A. The CauseValidation property of btnSubmit is not set to True.
- B. The CauseValidation property of btnCancel is not set to True.
- C. The CauseValidation property of btnSubmit is not set to False.
- D. The CauseValidation property of btnCancel is not set to False.

Correct Answer: D
