QUESTION 1

A company needs to migrate from a third-party storage system to an environment that can grow by scaling out. The solution must also allow use of a server for downloading upgrades.

Which solution meets the company\\'s requirements?

A. HP 3PAR StoreServ 7000

B. HP StoreOnce 6200

C. HP StoreVirtual 4000

D. HP 3PAR StoreServ 10000

Correct Answer: C

QUESTION 2

A customer plans to migrate data from an HP EVA 4400 to an HP 3PAR StoreServ 7400 Storage System. They have the following requirements:

-

The new solution must enable them to perform non-disruptive software upgrades.

-

The new solution must not rely on mutilating.

Which feature of the HP 3PAR StoreServ 7400 Storage System fulfills these requirements?

A. SmartStart

B. Virtual Service Processor (VSP)

C. Peer Persistence

D. Port Persistence

Correct Answer: D

QUESTION 3

You are meeting with a customer that has a small business with an unpredictable workload in a virtualized environment. Which product family from the HP array portfolio do you lead your discussion with?

A. P2000

B. P4000

![Pass2Lead Logo](https://Pass2Lead.com)
C. X3000

D. P6000

Correct Answer: B

QUESTION 4

A customer needs to migrate data from a legacy storage system to an HP StoreVirtual 4000. They also need to improve their patch management policies for storage management. How can the HP StoreVirtual 4000 enhance the patch management process for this customer? (Select two.)

A. by logging applied patch information

B. by displaying automatic patch alert notifications

C. by slipstreaming all patches for easy deployment

D. by displaying all pre-qualification failures

E. by automatically downloading and applying patches

Correct Answer: BD

HP P4000 SAN Solutions - SAN/iQ software 9.5 Patch Set 02 include: Enhanced the Online Upgrades feature to:

*

 (B) Display a notifications window in the CMC, which ensures you are notified of any updates to the system, such as patches, customer advisories, or updated release notes. The Notifications window displays automatically when the CMC is

first opened.

*

 Identify the type of patch (urgent, recommended, informational) in the notifications window so you can quickly determine the importance of the patch.

*

 Patch availability messages on the upgrades tab, menu bar, and package selection window indicate the type of patch (urgent, recommended, optional).

*

 Improve download capability by fixing the limitation of concurrent FTP connections. Increasing the number of concurrent FTP connections ensures that you can obtain updates in a timely manner and avoid connectivity issues.

D: HP P4000/StoreVirtual Patch set 04 include:

Added a check to 9.0 CMC online upgrades for any existing hardware problems in a pre-9.0 storage system during the upgrade pre-qualification tests, and ensures that the hardware passes the required tests before proceeding with the

upgrade. If a hardware problem is detected, the upgrade fails with an appropriate error message and can be retried after

![Pass2Lead](https://Pass2Lead.com)
resolving the problem.

QUESTION 5

A storage administrator plans to migrate data from an HP EVA4400 to an HP 3PAR StoreServ 7000 Storage System. The administrator needs to ensure that after the upgrade, in the event of a failure, hosts can access data replicated to another HP 3PAR without disruption.

Which licensed option of the HP 3PAR StoreServ 7000 Storage System provides this capability?

A. SmartStart

B. Peer Persistence

C. Virtual Service Processor (VSP)

D. N_Port ID Virtualization (NPIV)

Correct Answer: B

HP 3PAR Peer Persistence Software allows you to break the boundaries of storage, enabling your hosts, and data to move freely across data centers without impacting your business applications. It helps you in implementing a true cloud solution, where storage resources are shared across data centers, and are not constrained by their physical boundaries. Peer Persistence enables 3PAR systems located at metropolitan distances to act as peers to each other, presenting a nearly continuous storage system to hosts and servers connected to them.

This capability allows customers to configure a high-availability solution between two sites or data centers where switchover and switchback remains transparent to the hosts and applications running on those hosts. This secures business continuity without impacting performance and enables load balancing putting investments at both the data centers to optimal use.

Incorrect: Not A:

*

 SmartStart assisted with Windows OS installation process and integrated and optimized HP ProLiant server support software drivers, utilities and management agents, known as ProLiant Support Packs (PSPs).

*

 SmartStart was a single-server deployment tool that simplified HP ProLiant G7 server (and earlier) setup, providing a repeatable way to deploy consistent configurations. It was included in the HP Insight Foundation suite for ProLiant. Insight Foundation suite and SmartStart products are end-of-life (EOL) and the last servers they ship with are ProLiant G7 servers. ProLiant Gen8 servers and beyond use Intelligent Provisioning which is initiated by pressing during the server boot (POST) process.

Not C: HP 3PAR Service Processor functions as the communication interface between the customer\\'s IP network and HP 3PAR Central by managing all service-related communications in both directions.

Not D: N_Port ID Virtualisation (NPIV) is an industry-standard Fibre Channel (FC) protocol that provides a means to assign multiple FC addresses on the same physical link.
