QUESTION 1

How does mergeout purge data marked for deletion?

- A. It creates delete vectors, identifying files that can be removed from the system.
- B. It updates files by removing records marked with delete vectors.
- C. It writes undeleted records to files in a new location, then deletes all source files.
- D. It writes deleted records to files in a new location, then deletes all source files.

Correct Answer: A

QUESTION 2

What is the process to add hosts to an existing cluster? (Select two.)

- A. Restart spread on all hosts in the cluster.
- B. Recreate all projections on the new hosts.
- C. Update spread.conf on the new host(s) only.
- D. Install Vertica on the new hosts.
- E. Redistribute data to the new host(s).

Correct Answer: AE

QUESTION 3

What is a buddy projection?

- A. a projection that contains the same columns and has the same segmentation as the original projection, using different node ordering, stored in different files on the same node as the original
- B. a projection that contains a subset of rows from the original projection, stored in different files on a neighboring node of the original
- C. a projection that contains the same columns and has the same segmentation as the original projection, using different node ordering, stored in different files on a different node than the original
- D. a projection that contains a subset of rows from the original projection, stored in different files on the same node as the original

Correct Answer: A

QUESTION 4

What is the WOS?

- A. a redundant copy of commonly read data, cached in memory
- B. a column-store, disk-based method for storing data in Vertica
- C. a redundant write-only location used to improve node uptime
- D. a row-store, memory-based method for adding data to Vertica

Correct Answer: D

QUESTION 5

What does Time Series do?

- A. enables identification of a sequence of defined events
- B. evaluates the values of a given set of variables and groups those values into a window
- C. increments a counter based on whether an expression evaluates as true
- D. enables analysis of two series of data when their measurement intervals do not align precisely

Correct Answer: B
