QUESTION 1

What does Time Series do?

- A. enables identification of a sequence of defined events
- B. evaluates the values of a given set of variables and groups those values into a window
- C. increments a counter based on whether an expression evaluates as true
- D. enables analysis of two series of data when their measurement intervals do not align precisely

Correct Answer: B

QUESTION 2

What are features of using the Vertica backup script? (Select two.)

- A. It uses a lightweight locking protocol, stopping data loading for a brief period of time
- B. It can be run remotely via the Management Console
- C. It enables recovery by database, node, or table
- D. It enables backup of the entire database only
- E. It can be run while the database is not running.

Correct Answer: BC

QUESTION 3

What is a buddy projection?

- A. a projection that contains the same columns and has the same segmentation as the original projection, using different node ordering, stored in different files on the same node as the original
- B. a projection that contains a subset of rows from the original projection, stored in different files on a neighboring node of the original
- C. a projection that contains the same columns and has the same segmentation as the original projection, using different node ordering, stored in different files on a different node than the original
- D. a projection that contains a subset of rows from the original projection, stored in different files on the same node as the original

Correct Answer: A

QUESTION 4

Which features are available when using the Management Console for monitoring Vertica? (Select two.)

- A. can only be accessed from a Windows machine
- B. can only be accessed from a Linux machine
- C. can be used by multiple users, with different sets of privileges for each
- D. provides a unified view of all Vertica clusters
- E. provides a visual depiction of CPU usage across the nodes of the cluster

Correct Answer: DE

QUESTION 5

How does Vertica implement high availability in a clustered environment?

- A. full replicas of fact tables and segmented dimension tables
- B. full replicas of all data on all nodes
- C. built-in redundancy of data
- D. continuous mirroring of data

Correct Answer: A
