QUESTION 1

A site needs to be created within portal with its own title, user repository, default content, and branding. What single portlet is provided for creating a site within portal?

- A. Content Authoring portlet
- B. Theme Customizer portlet
- C. Virtual Portal Manager portlet
- D. New Site Creation Wizard portlet

Correct Answer: D

QUESTION 2

John has developed a custom step-up handler. He has implemented the two methods `init()` and `establishAuthLevel()` of the `StepUpAuthHandler` interface. What is the outcome of the method `establishAuthLevel()` returning null?

- A. A null pointer exception is thrown.
- B. The browser is redirected to the portal login page.
- C. The browser displays the HTTP error 403 Forbidden.
- D. The authentication level is assumed to be successfully established.

Correct Answer: D

QUESTION 3

Evan has defined and implemented a custom URI resolver for the article scheme in his development environment. Which of the following URLs is a valid URL to issue a request to the Resource Addressability Framework servlet for the article ABC?

- A. `http://localhost:10040/wps/poc?uri=article:ABC`
- B. `http://localhost:10040/wps/portal?uri=article:ABC`
- C. `http://localhost:10040/wps/proxy?uri=article:ABC`
- D. `http://localhost:10040/wps/contenthandler?uri=article:ABC`

Correct Answer: A

QUESTION 4

PreferencePortlet is Portlet Specification 2.0-compliant and the system is running WebSphere Portal V8.0. What is the

output of the following code?

```
public PreferencePortlet extends GenericPortlet{
    protected void processAction(ActionRequest actionRequest, ActionResponse){
        actionRequest.getPreferences().setValue("test", viewModePreferenceValue);
        actionRequest.getPreferences().store();
    }
    protected void doView(RenderRequest renderRequest, RenderResponse renderResponse) throws PortletException, IOException {
        // Generate action URL
    }
}
```

- A. The container throws java.lang.IllegalStateException because it is not allowed to change preferences in the processAction() method.
- B. The code compiles and executes fine. It stores a "test" preference at the end of the processAction() method call.
- C. The container throws javax.portlet.ReadOnlyException because it is only allowed to view preferences in the processAction() method.
- D. This code results in a compiler error because PortletPreference does not have the store() method.

Correct Answer: B

QUESTION 5

For client-side rendered pages, JavaScript code is executed in the browser JavaScript engine rather than on the server. Where would you enable client-side tracing and logging for all components in the namespace com.ibm.mashups.enabler?

- A. Set the trace com.ibm.mashups.enabler.*=all by using the Enable Tracing administration portlet.
- B. Set the trace com.ibm.mashups.enabler.*=all for each application server using the WebSphere Application Server administration console (Troubleshooting > Change Log Detail Levels).
- C. Set the custom properties cc.isDebugEnabled to true and cc.traceConfig to ["com.ibm.mashups.enabler.*"] for the WP CommonComponentConfigService resource environment provider using the WebSphere Application Server administration console.
- D. Set the flag dojoDebugEnabled to true and the property dojoTrace=["com.ibm.mashups.enabler.*"] in the JavaScript section file header.js for the theme.

Correct Answer: C
