**QUESTION 1**

What WLAN system feature is required to produce a scenario with the following configuration on a single access point?
(Choose 2)

1.

SSID = Guest / BSSID = AA:AA:AA:AA:AA:AA /

VLAN = 22 / Subnet = 192.168.22.0 / RF Channel = 6

2.

SSID = Corporate / BSSID = BB:BB:BB:BB:BB:BB /

VLAN = 33 / Subnet = 192.168.33.0 / RF Channel = 6 / User Type A

3.

SSID = Corporate / BSSID = BB:BB:BB:BB:BB:BB /

VLAN = 44 / Subnet = 192.168.44.0 / RF Channel = 6 / User Type B

- A. Multiple WLAN Profiles
- B. Call Admission Control
- C. Virtual Cell with SCA
- D. Access Categories
- E. User-based authentication
- F. Dual-radio AP hardware
- G. Integrated DHCP server

Correct Answer: AE

QUESTION 2

In an infrastructure Basic Service Set (BSS), how does the passive scanning process occur?

- A. Access points broadcast Beacons on all channels of each radio within the regulatory domain. Nearby client stations record information found in the Beacons for use in the association process.
- B. Client stations broadcast Probe Request frames on all supported channels in the regulatory domain. Nearby access points respond with Probe Response frames. Client stations record information in the Probe Response frames for use in the association process.
- C. Client stations broadcast Probe Request frames on the single channel for which they are programmed. Nearby access points respond on that channel with Probe Response frames. Client stations record information found in the Probe Response frames for use in the association process.

D. Access points broadcast Beacons on a single channel for which it is programmed. Nearby client stations listen for Beacon frames and record information found in the Beacons for use in the association process.

Correct Answer: D

QUESTION 3

Using the exhibit as a reference,

what is the maximum number of spatial streams that could be used for a downlink HT-OFDM transmission from AP-1 to STA-3?

- A. One spatial stream, because the BSS must maintain backwards compatibility with STA-2, which supports only 802.11g (ERP) without MIMO or multiple spatial streams.
- B. Two spatial streams, because the number of spatial streams for an HT-OFDM transmission is limited to the capabilities of the least capable HT station in the BSS.
- C. Two spatial streams, because the third transmit chain in the HT AP must be used simultaneously for protection mechanisms with the 802.11g (ERP) station.
- D. Three spatial streams, because HT-OFDM transmissions will be preceded with protection mechanisms using a basic data rate for STA-2 and possibly STA-1.

Correct Answer: D

QUESTION 4

Given:

ABC Company has hired you to perform an indoor site survey of their 7-story facility. ABC Company owns the building and rents out unused floors (floors 2 and 4) to other companies, and the other companies use 802.11 WLANs already.

ABC Company wants all of the offices they occupy to be surveyed as part of the project.

What actions should be recommended as part of the site survey project? (Choose two)

- A. Verify that RF signals from ABC's APs are not penetrating outside the perimeter of the building.
- B. Determine how much signal strength is bleeding between floors.
- C. Locate wiring closets on each floor occupied by ABC Company.
- D. Identify security best practice violations on neighboring WLANs.
- E. Verify that ABC's APs are not directly above or below APs on adjacent floors.

Correct Answer: BC

QUESTION 5

What features are most often configurable within 802.11 WLAN client utilities? (Choose two)

- A. Frame generator utility
- B. Power management
- C. Co-channel interference threshold
- D. Roaming aggressiveness
- E. AES key and block size

Correct Answer: BD
