-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

### QUESTION 1

What statements about the SSID are true? (Choose two)

- A. The SSID is a security session identifier used in RSNs.
- B. The SSID must be included in an association request frame.
- C. The SSID is an alphanumeric value assigned to device manufacturers by the IEEE.
- D. The SSID is a pseudo-random number assigned to each client by an AP.
- E. The SSID is an alphanumeric value with a maximum length of 32 octets.
- F. When configuring a new network, creating an SSID is optional.

Correct Answer: BE

---

### QUESTION 2

What phrase defines Equivalent Isotropically Radiated Power (EIRP)?

- A. Radio transmitter output power minus attached cable and connector loss
- B. Radio transmitter output power only
- C. Power supplied to the transmit antenna input plus antenna gain
- D. Reflected power due to an impedance mismatch in the signal path
- E. Power supplied from the transmission line to the antenna's input

Correct Answer: C

---

### QUESTION 3

When planning an access point deployment that utilizes Power over Ethernet (PoE) switches at the network edge, what design decision could adversely affect the operation of 802.3af APs?

- A. All ports on the Ethernet switch will be supporting Class 3 PoE powered devices.
- B. Some APs are connected to a PoE switch and are also receiving power from an AC outlet.
- C. The Ethernet switch's uplink ports are not connected to an 802.3af-compliant core or distribution Ethernet switch.
- D. A gigabit Ethernet switch port supporting an 802.11a/g AP auto-negotiates to 100 Mbps.
- E. The installation team is not informed that PoE support will reduce the recommended maximum UTP cabling length from 100m to 50m.

Correct Answer: A

---

**QUESTION 4**

What phrase correctly completes the following sentence?

When using WMM Power Save operation, a wireless client device \_\_\_\_\_.

- A. Alternates between awake and dozing, depending on its need to transmit and receive information
- B. Enters a low-power radio state until it receives a WMM PS-Poll frame from the AP
- C. Experiences higher throughput and lower latency than when operating in Active mode
- D. Powers down a subset of MIMO radio chains and transmits information at a slower data rate
- E. Buffers frames destined to the low-power AP until the AP wakes its radio and begins beaconing again

Correct Answer: A

---

**QUESTION 5**

Given: In a single channel architecture (SCA) WLAN system, 802.11n (HT) APs should not share an SSID with 802.11g (ERP) APs.

What is the reason for this recommendation?

- A. Client stations would see two different sets of AP capabilities as they roam between APs with the same BSSID.
- B. The added range of 802.11n APs would cause additional co-channel interference.
- C. The additional beacon material in 802.11n beacons would confuse 802.11b/g client stations.
- D. Beacons from 802.11n APs use 40 MHz channels, while beacons from 802.11g APs use 20 MHz channels.

Correct Answer: A
