QUESTION 1

What is a characteristic of synchronous remote replication?

- A. Source is minutes ahead of the remote replication.
- B. Source buffers the data and sends it depending on a cycle time.
- C. Source and remote replication always have identical data.
- D. Synchronous replication only used for extended distances.

Correct Answer: C

QUESTION 2

Your existing tape infrastructure uses block level technology. You need to restore a set of files but not the entire volume. How can this be accomplished without compromising the existing data on the server?

- A. Backup the server, restore the original volume, then restore the recent backup
- B. Restore the tape over the existing volume. Only extra files that do not exist will be added
- C. Build out a new server that mimics the existing server and restore the file to that newly created server
- D. Restore to an alternate location such as a newly allocated drive. Copy the files you need on to the volume.

Correct Answer: D

QUESTION 3

Which disk drive interfaces are considered to be parallel interfaces? (Choose two)

- A. SCSI
- B. SATA
- C. SAS
- D. ATA
- E. Fibre Channel

Correct Answer: AD

QUESTION 4

What is the definition of asynchronous replication?

- A. Does not require acknowledged copy of data on primary and secondary storage before the write is acknowledged to the host
- B. Requires acknowledged write of data on primary storage only and data is forwarded to secondary site as network capabilities permit
- C. Require acknowledged write of data on primary and secondary storage before the write is acknowledged to the host
- D. Does not require acknowledged write of data on primary storage before data is forwarded to secondary steps network capabilities permit

Correct Answer: B

QUESTION 5

Which activity is performed by a storage device manager?

- A. logical unit number (LUN) masking
- B. Volume group configuration
- C. File system configuration
- D. name server management

Correct Answer: A
