**QUESTION 1**

You are defining a File Write activity that will be used in several process definitions in a project. There is company standard directory location for writing these files that has been defined. Which two techniques could be used? (Choose two.)

- A. use a Global Variable to define the directory location
- B. configure a Write File within a conditional iterator group to do file writing on demand
- C. create a single file-writing process that can then be called from other processes as they need to create file writes
- D. use a user-defined process variable that can be assigned the file specification with Write File activities as needed

Correct Answer: AC

QUESTION 2

Which three statements are true? (Choose three.)

- A. From TIBCO Administrator, the deployment configuration is created and deployed.
- B. The TIBCO Administrator is used for preliminary testing and debugging of the business process(es).
- C. Using TIBCO Designer, the developer configures adapter services and saves the project with configured adapters.
- D. Using TIBCO Designer, the developer configures activities for the business process(es) and saves the project, which now includes process definition(s).
- E. Using TIBCO Domain Utility, the developer prepares the Enterprise Archive file (EAR file) by creating Enterprise Archives containing the desired adapter configurations and process definitions.

Correct Answer: ACD

QUESTION 3

Assume you are using one machine to host multiple TIBCO Administration Domains. What are two disadvantages of this architecture? (Choose two.)

- A. The architecture introduces a single point of failure.
- B. The architecture complicates domain resource isolation.
- C. The architecture complicates domain backup procedures.
- D. The architecture does not facilitate centralized administrative resources.

Correct Answer: AB

**QUESTION 4**

You have built a JDBC query within a BusinessWorks process definition. Your process needs to call one of three subprocesses. Which subprocess will be called depends on the DB query result set size (zero, exactly one, or more than one). Which two techniques could you use to determine which subprocess to call? (Choose two.)

- A. create a conditional iterate group to manage the subprocess calls based on the result set size
- B. create three conditional transitions (conditional on the three cases), one to each subprocess call
- C. create a set iterate group in which you configure a single XPath expression to manage which call to execute
- D. create a default transition to a single subprocess call; in the call configuration, create an XPath expression to manage which actual subprocess is called

Correct Answer: BD

QUESTION 5

You have designed a business service that you want to implement as a subprocess using TIBCO Designer. Which three steps are required to create this service and call it from an existing BusinessWorks process? (Choose three.)

- A. create a process definition for the subprocess
- B. place a Return to Parent activity in the subprocess
- C. place a Call Process activity in the existing BusinessWorks process
- D. configure Return-To Drop Down on the End activity to point to the Process Caller
- E. update the process context Global Variable on the Start activity within the subprocess
- F. specify the input, output, and any error schemas of the subprocess on the Start and End activities within the subprocess

Correct Answer: ACF
