- B. Use a third-party solution for managing identities, and migrate the application to run on Amazon S3, EC2 Spot Instances, and Amazon EC2.
- C. Use Amazon Cognito for managing identities, and migrate the application to run on Amazon S3, Amazon API Gateway, and AWS Lambda.

Data that is more than one month old never needs to be referenced by the application, but needs to be archived for year-end analytics.

What is the MOST cost-efficient way to meet these requirements? (Choose two.)

- A. Use DynamoDB time-to-live settings to expire items after a certain time period.
- B. Provision a higher write capacity unit to minimize the number of partitions.
- C. Create separate tables for each week's data with higher throughput for the current week.
