QUESTION 1

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic. NOTE: Each correct selection is worth one point.

Hot Area:

If a message that has a TTL of four hours is written to Queue1 and is never read, the message will be [answer choice].

deleted after two hours
deleted after four hours
deleted after two hours and five minutes
retained until manually deleted

If a message that has a TTL of two hours is written to Queue1, and then read after one hour, the message will be [answer choice].

deleted immediately
deleted in five minutes
deleted in one hour
retained until manually deleted

Correct Answer:

If a message that has a TTL of four hours is written to Queue1 and is never read, the message will be [answer choice].

deleted after two hours
deleted after four hours
deleted after two hours and five minutes
retained until manually deleted

If a message that has a TTL of two hours is written to Queue1, and then read after one hour, the message will be [answer choice].

deleted immediately
deleted in five minutes
deleted in one hour
retained until manually deleted

Box 1: deleted after two hours All messages sent into a queue or topic are subject to a default expiration that is set at the entity level with the defaultMessageTimeToLive property and which can also be set in the portal during creation and adjusted later. The default expiration is used for all messages sent to the entity where TimeToLive is not explicitly set. The default expiration also functions as a ceiling for the TimeToLive value. Messages that have a longer TimeToLive expiration than the default value are silently adjusted to the defaultMessageTimeToLive value before being enqueued.
Box 2: deleted in one hour

References: <https://docs.microsoft.com/en-us/azure/service-bus-messaging/message-expiration>

QUESTION 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure virtual machine named VM1. VM1 was deployed by using a custom Azure Resource Manager template named ARM1.json.

You receive a notification that VM1 will be affected by maintenance.

You need to move VM1 to a different host immediately.

Solution: From the Update management blade, you click Enable.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

You would need to Redeploy the VM.

References: <https://docs.microsoft.com/en-us/azure/virtual-machines/windows/redeploy-to-new-node>

QUESTION 3

You have an Azure Migrate project that has the following assessment properties: Target location: East US Storage redundancy: Locally redundant. Comfort factor: 2.0 Performance history: 1 month Percentile utilization: 95th Pricing tier: Standard Offer: Pay as you go You discover the following two virtual machines: A virtual machine named VM1 that runs Windows Server 2016 and has 10 CPU cores at 20 percent utilization A virtual machine named VM2 that runs Windows Server 2012 and has four CPU cores at 50 percent utilization How many CPU cores will Azure Migrate recommend for each virtual machine? To answer, select the appropriate options in the answer area. NOTE:Each correct selection is worth one point.

Hot Area:

VM1:

1
2
3
4

VM2:

Correct Answer:

VM1:

1
2
3
4

VM2:

1
2
3
4

www.Pass4Lead.com

Box 2: 4

$$4 * 0.50 * 0.95 * 2 = 3.8$$

Note: The number of cores in the machines must be equal to or less than the maximum number of cores (128 cores) supported for an Azure VM.

If performance history is available, Azure Migrate considers the utilized cores for comparison. If a comfort factor is specified in the assessment settings, the number of utilized cores is multiplied by the comfort factor.

If there's no performance history, Azure Migrate uses the allocated cores, without applying the comfort factor.

When you are finished performing all the tasks, click the \\Next\\ button.

Note that you cannot return to the lab once you click the \\Next\\ button. Scoring occur in the background while you complete the rest of the exam.

Overview

The following section of the exam is a lab. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design. Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

To start the lab

You may start the lab by clicking the Next button.

You plan to move backup files and documents from an on-premises Windows file server to Azure Storage. The backup files will be stored as blobs.

You need to create a storage account named corpdata7523690n2. The solution must meet the following requirements:

Ensure that the documents are accessible via drive mappings from Azure virtual machines that run Windows Server 2016.

Provide the highest possible redundancy for the documents.

Minimize storage access costs.

What should you do from the Azure portal?

Correct Answer:

Step 1: In the Azure portal, click All services. In the list of resources, type Storage Accounts. As you begin typing, the list filters based on your input. Select Storage Accounts.

Step 2: On the Storage Accounts window that appears, choose Add.

Step 3: Select the subscription in which to create the storage account.

Step 4: Under the Resource group field, select Create New. Create a new Resource

Create storage account

Basics **Advanced** Tags Review + create

Azure Storage is a Microsoft-managed service providing cloud storage that is highly available, secure, durable, scalable, and redundant. Azure Storage includes Azure Blobs (objects), Azure Data Lake Storage Gen2, Azure Files, Azure Queues, and Azure Tables. The cost of your storage account depends on the usage and the options you choose below. [Learn more](#)

PROJECT DETAILS

Select the subscription to manage deployed resources and costs. Use resource groups like folders to organize and manage all your resources.

* Subscription: <your-subscription>

* Resource group: sample-resource-group

Create new

INSTANCE DETAILS

The default deployment model is Resource Manager. You can also use the classic deployment model instead. [Choose classic](#)

* Storage account name: []

* Location: []

Performance: []

Account kind: StorageV2 (general purpose v2)

Replication: Locally-redundant storage (LRS)

Access tier (default): Cool Hot

Review + create Previous Next: Advanced >

A resource group is a container that holds related resources for an Azure solution.

Name: your-resource-group

OK Cancel

Step 5: Enter a name for your storage account: corpdata7523690n2

Step 6: For Account kind select: General-purpose v2 accounts (recommended for most scenarios)

General-purpose v2 accounts is recommended for most scenarios. . General-purpose v2 accounts deliver the lowest per-gigabyte capacity prices for Azure Storage, as well as industry-competitive transaction prices.

Step 7: For replication select: Read-access geo-redundant storage (RA-GRS)

Read-access geo-redundant storage (RA-GRS) maximizes availability for your storage account. RA-GRS provides read-

only access to the data in the secondary location, in addition to geo-replication across two regions.

QUESTION 5

You have an Azure subscription that contains 100 virtual machines.

You regularly create and delete virtual machines.

You need to identify unused disks that can be deleted.

What should you do?

- A. From Microsoft Azure Storage Explorer, view the Account Management properties.
- B. From the Azure portal, configure the Advisor recommendations.
- C. From Cloudyn, open the Optimizer tab and create a report.
- D. From Cloudyn, create a Cost Management report.

Correct Answer: A
