-  **800,000+** Satisfied Customers

**QUESTION 1**

You have an Azure subscription named Subscription1.

You create an Azure Storage account named contosostorage, and then you create a file share named Data;

Which UNC path should you include in a script that references files from the data file share? To answer, drag the appropriate values to the correct targets. Each value may be used once, more than once, or not at all. You may need to drag the

split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Values	Answer Area
blob	\\ <input type="text"/> . <input type="text"/> \ <input type="text"/>
blob.core.windows.net	
contosostorage	
data	
file	
file.core.windows.net	
portal.azure.com	
subscription1	

Correct Answer:

Values	Answer Area
<input type="text" value="blob"/>	
<input type="text" value="blob.core.windows.net"/>	<input type="text" value="\\ contosostorage . file.core.windows.net \ data"/>
<input type="text" value="file"/>	
<input type="text" value="portal.azure.com"/>	
<input type="text" value="subscription1"/>	

## QUESTION 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company registers a domain name of contoso.com.

You create an Azure DNS zone named contoso.com, and then you add an A record to the zone for a host named www that has an IP address of 131.107.1.10.

You discover that Internet hosts are unable to resolve www.contoso.com to the 131.107.1.10 IP address.

You need to resolve the name resolution issue.

Solution: You create a PTR record for www in the contoso.com zone.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

Modify the Name Server (NS) record.

**QUESTION 3**

You have a virtual network named VNet1 as shown in the exhibit. (Click the Exhibit tab.)

Refresh	Move	Delete
Resource group <a href="#">(change)</a> Production		Address space 10.2.0.0/16
Location West US		DNS servers Azure provided DNS service
Subscription <a href="#">(change)</a> Production subscription		
Subscription ID 14d26092-8e42-4ea7-b770-9dcef70fb1ea		
Tags <a href="#">(change)</a> <a href="#">Click here to add tags</a>		

---

**Connected devices**

DEVICE	TYPE	IP ADDRESS	SUBNET
No results.			

No devices are connected to VNet1.

You plan to peer VNet1 to another virtual network named VNet2 in the same region. VNet2 has an address space of 10.2.0.0/16.

You need to create the peering.

What should you do first?

- A. Configure a service endpoint on VNet2.
- B. Modify the address space of VNet1.

- C. Add a gateway subnet to VNet1.
- D. Create a subnet on VNet1 and VNet2.

Correct Answer: B

The virtual networks you peer must have non-overlapping IP address spaces. The exhibit indicates that VNet1 has an address space of 10.2.0.0/16, which is the same as VNet2, and thus overlaps. We need to change the address space for

VNet1.

#### QUESTION 4

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure subscription named Subscription1. Subscription1 contains a resource group named RG1. RG1 contains resources that were deployed by using templates. You need to view the date and time when the resources were

created in RG1.

Solution: From the RG1 blade, you click Automation script.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

---

#### QUESTION 5

DRAG DROP

You have an Azure subscription that is used by four departments in your company. The subscription contains 10 resource groups. Each department uses resources in several resource groups.

You need to send a report to the finance department. The report must detail the costs for each department.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions

to the answer area and arrange them in the correct order.

Select and Place:

### Actions

### Answer Area

- Assign a tag to each resource group.
- Assign a tag to each resource.
- Download the usage report.
- From the Cost analysis blade, filter the view by tag.
- Open the **Resource costs** blade of each resource group.

Correct Answer:

### Actions

### Answer Area

- 
- Assign a tag to each resource.
- 
- 
- Open the **Resource costs** blade of each resource group.

Box 1: Assign a tag to each resource.

You apply tags to your Azure resources giving metadata to logically organize them into a taxonomy. After you apply tags, you can retrieve all the resources in your subscription with that tag name and value. Each resource or resource group

can have a maximum of 15 tag name/value pairs. Tags applied to the resource group are not inherited by the resources in that resource group.

Box 2: From the Cost analysis blade, filter the view by tag

After you get your services running, regularly check how much they're costing you. You can see the current spend and burn rate in Azure portal.

Visit the Subscriptions blade in Azure portal and select a subscription.

You should see the cost breakdown and burn rate in the popup blade.

Click Cost analysis in the list to the left to see the cost breakdown by resource. Wait 24 hours after you add a service for the data to populate.

You can filter by different properties like tags, resource group, and timespan. Click Apply to confirm the filters and Download if you want to export the view to a Comma-Separated Values (.csv) file.

Box 3: Download the usage report
