Following Questions and Answers are all new published by Microsoft Official Exam Center

QUESTION 1

You need to meet the scaling requirements for Policy Service. What should you store in Azure Redis Cache?

A. ViewState

B. HttpContext.tems

C. Session state

D. TempData

Correct Answer: C

QUESTION 2

You have an Azure subscription that contains a virtual network named VNet1. VNet1 has two subnets named Subnet1 and Subnet2. VNet1 is in the West Europe Azure region. The subscription contains the virtual machines in the following table.

Name	Connected to
VM1	Subnet1
VM2	Subnet1
VM3	Subnet2

You need to deploy an application gateway named AppGW1 to VNet1. What should you do first?

A. Add a load balancer.

B. Add a virtual network.

C. Add a subnet

D. Create a network security group (NSG).

Correct Answer: C

QUESTION 3

From the MFA Server blade, you open the Block/unblock users blade as shown in the exhibit.

Block/unblock users

A blocked user will not receive Multi-Factor Authentication requests. Authentication attempts for that user will be automatically denied.
A user will remain blocked for 90 days from the time they are blocked. To manually unblock a user, click the "Unblock" action.

Blocked users

USER	REASON	DATE	ACTION
AlexW@M365x832514.OnMicrosoft.com	Lost phone	06/14/2018 8:26:38 PM	Unblock

What caused AlexW to be blocked?

A. The user account password expired.

B. The user reported a fraud alert when prompted for additional authentication.

C. An administrator manually blocked the user.

D. The user entered an incorrect PIN four times within 10 minutes.

Correct Answer: C

QUESTION 4

DRAG DROP

You have an on-premises file server named Server1 that runs Windows Server 2016.

You have an Azure subscription that contains an Azure file share.

You deploy an Azure File Sync Storage Sync Service, and you create a sync group.

You need to synchronize files from Server1 to Azure.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
Install the Azure File Sync agent on Server1.	
Add a server endpoint.	
Register Server1.	
Create a Recovery Services vault.	
Create an Azure on-premises data gateway.	
Install the DFS Replication server role on Server1.	

Correct Answer:

Actions	Answer Area
	Install the Azure File Sync agent on Server1.
	Register Server1.
	Add a server endpoint.
Create a Recovery Services vault.	
Create an Azure on-premises data gateway.	
Install the DFS Replication server role on Server1.	

Step 1: Install the Azure File Sync agent on Server1

The Azure File Sync agent is a downloadable package that enables Windows Server to be synced with an Azure file share

Step 2: Register Server1.

Register Windows Server with Storage Sync Service

Registering your Windows Server with a Storage Sync Service establishes a trust relationship between your server (or cluster) and the Storage Sync Service.

Step 3: Add a server endpoint

Create a sync group and a cloud endpoint.

A sync group defines the sync topology for a set of files. Endpoints within a sync group are kept in sync with each other. A sync group must contain one cloud endpoint, which represents an Azure file share and one or more server endpoints.

A server endpoint represents a path on registered server.

QUESTION 5

Note: This question is part of series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A company backs up data to on-premises servers at their main facility. The company currently has 30 TB of archived data that infrequently used. The facility has download speeds of 100 Mbps and upload speeds of 20 Mbps.

You need to securely transfer all backups to Azure Blob Storage for long-term archival. All backup data must be sent within seven days.

Solution: Use the Set-AzureStorageBlobContent Azure PowerShell command to copy all backups asynchronously to Azure Blob Storage.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B
