QUESTION 1

HOTSPOT

You plan to implement an access review to meet the following requirements:

The access review must be enforce until otherwise configured. Each user or group that has access to the Azure Environment must be in the scope of the access review.

The access review must be completed within two weeks. A lack of response must not cause changes in the operational environment. An administrator creates the access review shown in the answer area. Which two sections of the access

should you modify to meet the requirements? Answer, select the appropriate sections in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Create an access review

Review name * Quarterly review

Description

Start date * 05/11/2020

Frequency Quarterly

Duration (in days) 21

End Never End by Occurrences

Number of times

End date * 04/10/2020

Users

Users to review Members of a group

Scope Guest users only Everyone

QUESTION 2

You need to configure the Azure ExpressRoute circuits.

How should you configure Azure ExpressRoute routing? To answer, drag the appropriate configurations to the correct locations. Each Configuration may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content NOTE: Each correct selection is worth one point.

Select and Place:

Configurations

Use BGP communities to configure BGP's Local Preference.

Use BGP to append the private AS numbers to the advertised prefixes.

Use BGP to append the public AS numbers to the advertised prefixes.

Answer Area

Routing from A.Datum to Azure:

Routing from Microsoft Online Services to A.Datum:

Correct Answer:

Configurations

Use BGP to append the public AS numbers to the advertised prefixes.

Answer Area

Routing from A.Datum to Azure:

Use BGP to append the private AS numbers to the advertised prefixes.

Routing from Microsoft Online Services to A.Datum:

Use BGP communities to configure BGP's Local Preference.

Azure compute services, namely virtual machines (IaaS) and cloud services (PaaS), that are deployed within a virtual network can be connected through the private peering domain. The private peering domain is considered to be a trusted extension of your core network into Microsoft Azure.

Services such as Azure Storage, SQL databases, and Websites are offered on public IP addresses. You can privately connect to services hosted on public IP addresses, including VIPs of your cloud services, through the public peering routing domain. You can connect the public peering domain to your DMZ and connect to all Azure services on their public IP addresses from your WAN without having to connect through the internet.

QUESTION 3

You need to meet the vendor notification requirement.

Solution: Create and apply a custom outbound Azure API Management policy.

Does the solution meet the goal?

A. Yes

B. No

Correct Answer: B

<https://docs.microsoft.com/en-us/azure/api-management/api-management-howto-configure-notifications>

QUESTION 4

You need to implement App2 to meet the application requirements.

What should you include in the implementation? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

App Service plan pricing tier:

	<input type="checkbox"/>
Isolated	<input type="checkbox"/>
Shared	<input type="checkbox"/>
Standard	<input type="checkbox"/>

Enabled feature:

	<input type="checkbox"/>
Always On	<input type="checkbox"/>
Auto Swap	<input type="checkbox"/>
Web Sockets	<input type="checkbox"/>

Correct Answer:

App Service plan pricing tier:

	▼
Isolated	
Shared	
Standard	

Enabled feature:

	▼
Always On	
Auto Swap	
Web Sockets	

<https://azure.microsoft.com/en-us/pricing/details/app-service/plans/> <https://docs.microsoft.com/en-us/azure/azure-functions/functions-scale>

QUESTION 5

HOTSPOT

You have an Azure web app named App1 that has the following configurations:

1.
The app runs on three instances.
2.
The minimum number of instances is one.
3.
The maximum number of instances is five.

You create the following autoscale rules for App1:

1.
Decrease the instance count by one when the CPU percentage is less than 30.
2.
Decrease the instance count by one when the memory percentage is less than 50.

3.

Increase the instance count by one when the CPU percentage is greater than 80.

4.

Increase the instance count by one when the memory percentage is greater than 75.

You expect App1 to be utilized as shown in the following table.

Day	Hours	CPU	Memory
Monday to Friday	08:00 to 23:59	85%	40%
Monday to Friday	00:00 to 07:59	25%	60%
Saturday to Sunday	00:00 to 23:59	30%	55%

You need to identify the maximum number of instances that will be used by App1 during the expected periods of utilization.

What should you identify? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Monday to Friday 00:00–07:59: ▼

1
2
3
4
5

Monday to Friday 08:00–23:59: ▼

1
2
3
4
5

Saturday to Sunday 00:00-23:59: ▼

1
2
3
4
5

Correct Answer:

Answer Area

Monday to Friday 00:00–07:59:

	▼
1	
2	
3	
4	
5	

Monday to Friday 08:00–23:59:

	▼
1	
2	
3	
4	
5	

Saturday to Sunday 00:00-23:59:

	▼
1	
2	
3	
4	
5	

On scale out, autoscale runs if any rule is met. On scale-in, autoscale requires all rules to be met. Therefore, the web app will scale out but will never scale back in because there is no time where the CPU is less than 30% AND the memory is less than 50%.
