QUESTION 1

HOTSPOT

A company uses Azure Backup Agent to back up specific files and folders from an on- premises virtual machine (VM).
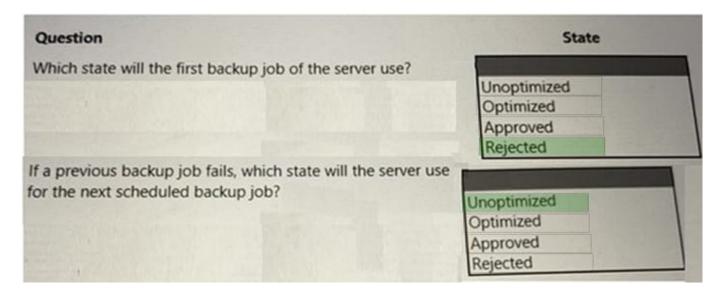

An administrator reports that the backup job is transferring files slowly. You determine that the backup job is verifying changes in directories by scanning the entire volume.

You need to determine the state of the backup job.

Hot Area:

Question	State
Which state will the first backup job of the server use?	Unoptimized / Optimized / Approved / Rejected
If a previous backup job fails, which state will the server use for the next scheduled backup job?	Unoptimized / Optimized / Approved / Rejected

Correct Answer:

Question	State
Which state will the first backup job of the server use?	Unoptimized / Optimized / Approved / **Rejected**
If a previous backup job fails, which state will the server use for the next scheduled backup job?	**Unoptimized** / Optimized / Approved / Rejected

QUESTION 2

A company uses an Azure Virtual Network (VNet) gateway named VNetGW1. VNetGW1 connects to a partner site by using a site-to-site VPN connection with dynamic routing.

The company observes that the VPN disconnects from time to time.

You need to troubleshoot the cause for the disconnections.

What should you verify?

A. The partner\\'s VPN device and VNetGW1 are configured using the same shared key.

B. The IP address of the local network gateway matches the partner\\'s VPN device.

C. The partner\\'s VPN device is enabled for Perfect forward secrecy.

D. The partner\\'s VPN device and VNetGW1 are configured with the same virtual network address space.

Correct Answer: C

https://learn.microsoft.com/en-us/azure/vpn-gateway/vpn-gateway-troubleshoot-site-to-site-disconnected-intermittently (step 7)

QUESTION 3

A company has on-premises application server that runs in System Center Virtual Machine Manager (SCVMM). The company configures Azure Site Recovery.

An administrator at the company reports that they receive an error message. The error message indicates that there are replication issues.

You need to troubleshoot the issue.

Which log should you review?

A. Network Security Group flow log

B. Azure Monitor log

C. Network Watcher diagnostic log

D. SCVMM debug log

Correct Answer: A

Flow logs are a very good way of checking what happens at L4 level. https://learn.microsoft.com/en-us/azure/network-watcher/network-watcher-nsg-flow-logging-overview#why-use-flow-logs

QUESTION 4

A company deploys an ExpressRoute circuit.

![Pass2Lead](https://Pass2Lead.com)
You need to verify accepted peering routes from the ExpressRoute circuit.

Which PowerShell cmdlet should you run?

A. Get-AzExpressRouteCrossConnectionPeering

B. Get-AzExpressRouteCircuit

C. Get-AzExpressRouteCircuitPeeringConfig

D. Get-AzExpressRouteCircuitRouteTable

E. Get-AzExpressRouteCircuitStats

Correct Answer: D

To verify accepted peering routes from the ExpressRoute circuit, you should run the PowerShell cmdlet Get-AzExpressRouteCircuitRouteTable. According to 1, this cmdlet returns a list of routes advertised by an ExpressRoute circuit peering. You can specify which peering type (AzurePrivatePeering, AzurePublicPeering, or MicrosoftPeering) and which route table (AdvertisedPublicPrefixes or AdvertisedPublicPrefixesState) you want to view.

QUESTION 5

A company uses Azure AD Connect. The company plans to implement self-service password reset (SSPR).

An administrator receives an error that password writeback cloud not be enabled during the Azure AD Connect configuration. The administrator observes the following event log error:

Error getting auth token

You need to resolve the issue.

Solution: Use a global administrator account that is not federated to configure Azure AD Connect.

Does the solution meet the goal?

A. Yes

B. No

Correct Answer: B

The proposed solution to use a global administrator account that is not federated to configure Azure AD Connect does not directly address the error message "Error getting auth token" described in the scenario , so it is unlikely to solve the

issue.

To resolve this issue, you should verify that the Azure AD Connect server can authenticate to the Azure AD tenant using valid credentials. If authentication is successful, then you can investigate other possible causes such as network

connectivity problems, misconfigured firewall rules, expired certificates, etc.

Therefore, the correct answer remains option B, "No".
