QUESTION 1

An administrator has a new application that sends 2MB messages to a remote queue manager, which is significantly larger than current messages which are 50KB.

How can an administrator ensure minimal impact on the existing environment?

- A. Set the workload balancing option to MIXEDSIZE.
- B. Require the queue manager to use message chunking.
- C. Set MSGGROUP to TRUE and MSGSIZE to a value of 2MB.
- D. Use separate channels and transmit queues for the new messages.

Correct Answer: D

QUESTION 2

Which two statements are true if a CHLAUTH rule has been configured as TYPE(SSLPEERMAP)? (Select two.)

- A. SSLPEERMAP must allow all peers to connect.
- B. SSLPEERMAP must be accompanied by an SSLPEER.
- C. SSLPEERMAP record can map the TLS distinguished name of the issuer certificate.
- D. SSLCERTI is the TLS distinguished name of the matched certificate.

Correct Answer: BC

QUESTION 3

Statistics must be gathered for a channel on a distributed platform queue manager which connects to a z/OS queue manager. The channel will be processing a very high message volume and the processing impact to the distributed queue manager must be minimized.

What is the appropriate setting for the STATCHL property of the channel definition?

- A. Low
- B. High
- C. Medium
- D. Low with the QMGR STATCHL property set to NONE

Correct Answer: A

QUESTION 4

Due to a hardware failure, a queue manager stops. Both the queue manager configuration and log data are lost. The queue manager is unable to restart or to be recovered from the log.

In this situation, what can the administrator do to restore service?

- A. Use media recovery to restore damaged objects.
- B. Use the strmqm -s command to start queue manager in safe mode.
- C. Mount a new file system and move queue files onto new hardware.
- D. Recreate the queue manager and all of its objects from previously saved definitions.

Correct Answer: D
