**QUESTION 1**

Which two statements are true regarding a client schedule being manually launched in the Operations Center?

A. The client must be in schedule polling mode.

B. The client must be using immediate action schedules.

C. The client must be defined through the Operations Center.

D. The client must be using server-prompted scheduling mode.

E. The client must be associated with a Tivoli Storage Manager schedule.

Correct Answer: CE

**QUESTION 2**

What is the meaning of the RETONLY parameter?

A. The number of days to retain a backup version after that version becomes inactive.

B. The maximum number of backup versions to retain for files that are currently on the client file system.

C. The maximum number of backup versions to retain for files that have been deleted from the client file system.

D. The number of days to retain the last backup version of a file that has been deleted from the client file system.

Correct Answer: D

RETOnly determines the number of days to retain the last Exchange Server database backup version of a database that has been deleted from the Data Protection for Exchange client system.

**QUESTION 3**

What is an incremental by date backup?

A. It backs up files that have have never been backed up before.

B. It backs up files that have been previously backed up using snapshot backup.

C. It backs up files with a modification date and time that is later than that of the last full incremental backup of the same files in that filespace.

D. It backs up files with a modification date and time that is the same as that of the last full incremental backup of the same files in that filespace

Correct Answer: C

The client backs up only those files whose modification date and time is later than the date and time of the last incremental backup of the file system on which the file resides. Files added by the client after the last incremental

backup, but with a modification date earlier than the last incremental backup, are not backed up.

---

**QUESTION 4**

What is the result when the migrate process moves data from a deduplicated pool to a non- deduplicated pool?

A. The migration process fails.

B. The target pool is marked as deduplicated.

C. The data is reconstituted on the target pool.

D. The data in both storage pools is reconstituted.

Correct Answer: B

* Data deduplication in Tivoli Storage Manager is a two-phase process. In the first phase, the server identifies the duplicate data in the storage pool. As volumes in the storage pool are filled, data becomes eligible for duplicate identification. A volume does not have to be full before duplicate identification starts. In the second phase, duplicate data is removed by any of the following processes:

Reclaiming volumes in the primary-storage pool, copy-storage pool, or active-data pool Backing up a primary-storage pool to a copy-storage pool that is also set up for deduplication Copying active data in the primary-storage pool to an active-data pool that is also set up for deduplication Migrating data from the primary-storage pool to another primary-storage pool that is also set up for deduplication Moving data from the primary-storage pool to a different primary-storage pool that is also set up for deduplication, moving data within the same copy-storage pool, or moving data within the same active-data pool

**QUESTION 5**

What is the default log to record scheduled command output on a client?

A. schedule.log

B. tsmsched.log

C. dsmsched.log

D. adsmsched.log

Correct Answer: C

Checking the Schedule Log

The Tivoli Storage Manager client stores detailed information about each scheduled event in a file. This file contains information such as the statistics about the backed-up objects, the name of the server to which the objects are backed up,

and the time and date of the next scheduled operation.

The default name for this file is dsmsched.log.
