QUESTION 1

If a file is deleted from the customer\\'s server, what determines how long the IBM Tivoli Storage Manager server retains the backup?

A. The Retain Only setting in backup copy group

B. The Retain Extra setting in backup copy group

C. The Version Extra setting in backup copy group

D. The Versions Deleted setting in backup copy group

Correct Answer: A

You specify the number of days to keep backup versions with two parameters:

*

 Retain Extra Versions (how many days to keep inactive backup versions; the days are counted from the day that the version became inactive)

*

 Retain Only Versions (how many days to keep the last backup version of a file that has been deleted)

QUESTION 2

What is compatible with client-side deduplication?

A. SSL

B. NDMP

C. encryption

D. LAN-free backup

Correct Answer: B

When you configure client-side data deduplication, the following requirements must be met:

*

 The client and server must be at version 6.2.0 or later.

*

 (not D) Client-side deduplication cannot be used in combination with LAN-free backups.

*

 (not C) Files that are intended for deduplication must not be encrypted. Encrypted files and files from encrypted file

systems cannot be deduplicated. Etc.

QUESTION 3

Which IBM Tivoli Storage Manager server database backup type can be taken offsite?

A. image database backups

B. database snapshot backups

C. differential database backups

D. high availability database backups

Correct Answer: B

Snapshot database backups are typically used for off-site disaster recovery purposes.

Note: When the client backups are complete, the new data in the primary storage pools should be copied to a copy storage pool. The copy storage pool tapes, along with the database backup tapes, should be taken to a secure off-site location or vault. The copy storage pool and database backup tapes are referred to collectively as the off-site backups, and will be used to restore your environment in the event of a catastrophic failure or disaster.

QUESTION 4

What is the default log to record scheduled command output on a client?

A. schedule.log

B. tsmsched.log

C. dsmsched.log

D. adsmsched.log

Correct Answer: C

Checking the Schedule Log

The Tivoli Storage Manager client stores detailed information about each scheduled event in a file. This file contains information such as the statistics about the backed-up objects, the name of the server to which the objects are backed up,

and the time and date of the next scheduled operation.

The default name for this file is dsmsched.log.

QUESTION 5

What is left on the client disk when a file is migrated using IBM Tivoli Storage Manager space management?

A. a mig file

B. a stub file

C. no file is left

D. a directory file

Correct Answer: B

When a file is migrated from your local system to Tivoli Storage Manager storage, a placeholder, or stub file, is created in place of the original file. Stub files contain the necessary information to recall your migrated files and remain on your local file system so that the files appear to reside locally. This contrasts with archiving, where you usually delete files from your local file system after archiving them.
