**QUESTION 1**

What happens to data that is scheduled to be archived if there is no archive copy group in the management class?

- A. The archive fails.
- B. The archive retention grace period of 90 days is used.
- C. The archive retention grace period of 365 days is used.
- D. The default backup copy group setting Retain Only is used.

Correct Answer: C

*

. If you do not specify a management class, Tivoli Storage Manager uses the management class in the active policy set specifying the longest retention period.

*

The archive copy of the file managed by the grace period is retained in server storage for the number of days specified by the archive retention grace period. This period starts from the day on which the file is first archived. For example, if the archive retention grace period for the policy domain STANDARD is used, an archive copy expires 365 days from the day the file is first archived.

- C. Run a snapshot and specify the post-snapshot script to delete old logs.

QUESTION 4

Reclamation can be done on which type of storage pool?

- A. random pool
- B. sequential pool
- C. NDMPDUMP pool
- D. EMC CENTERRA storage pool

Correct Answer: B

RECLAIM STGPOOL (Reclaim sequential-access storage pool) Use this command to reclaim volumes in a sequential-access storage pool. Reclamation makes the fragmented space on volumes usable again by moving any remaining files from one volume to another volume. This makes the original volume available for reuse.
