QUESTION 1

From within IBM Cognos Connection, what must an administrator deploy to move an entire IBM Cognos BI application into a new and empty environment?

- A. Content store
- B. All folders within Public Folders
- C. Notification store
- D. Content manager

Correct Answer: A

QUESTION 2

What must the administrator do to set up the sample audit reports that come with IBM Cognos BI?

- A. Create a separate data source connection to the content store.
- B. Set up an audit database and configure log messages to be sent to the database.
- C. Set up a log file and configure log messages to be sent to the file.
- D. Create a Framework Manager model using either a database or flat file as the data source, and then publish a package.

Correct Answer: D

QUESTION 3

Which statement is true about the definition of the Application tier?

- A. The Application tier hosts the dispatcher and content manager that reside in a servlet container.
- B. The Application tier hosts the dispatcher, which includes the IBM Cognos Application Firewall and Access Manager.
- C. The Application tier hosts the BI server and the content store.
- D. The Application tier hosts the content manager, which contains data such as a report specification, IBM Cognos namespace, and so on.

Correct Answer: B

Below is a partial diagram of the processing that occurs when a user launches saved output in IBM Cognos Connection and views it in IBM Cognos Viewer.

At the level of the dispatcher, which of the IBM Cognos BI services is used to process the request?

- A. Report service
- B. Presentation service
- C. Batch report service
- D. Delivery service
