QUESTION 1

Which two statements are true when performing virtual machine backups directly to tape?

- A. Single file restores need more time.
- B. An additional disk pool is required for the VMware backups of user data.
- C. TSM meta data (control data) must reside on a disk-based storage pool.
- D. The environment is adjusted automatically for optimum tape performance.
- E. The same functionality is available regardless of the type of storage pool used.

Correct Answer: AC

QUESTION 2

If a collocated storage pool runs out of scratch tapes, what will occur if data must be written to the pool?

- A. The process fails.
- B. The process waits for a mount to be satisfied.
- C. Data is written to a volume ignoring the request to collocate.
- D. The server stops the process until scratch tapes are available.

Correct Answer: B

QUESTION 3

After defining a collocation group to a Tivoli Storage Manager server, what must be done to utilize its capabilities?

- A. Update a node in the group.
- B. Register the pool to the group.
- C. Add a new member to the group.
- D. Define a storage pool to the group.

Correct Answer: A

QUESTION 4

Which parameter of an archive copy group sets a specific retention period that must be met before a file qualifies for expiration?

- A. retain last
- B. retain extra
- C. retain version
- D. version deleted

Correct Answer: B

QUESTION 5

What is the first step to isolate the problem if multiple clients\' backups failed?

- A. Restart client nodes.
- B. Check client error log files.
- C. Check whether storage pools are available.
- D. Query the Tivoli Storage Manager server activity log.

Correct Answer: BD
