QUESTION 1

Which statement is true regarding an administrative with node owner authority?

- A. Only one administrator can have owner authority of a node.
- B. They cannot log on locally to the backup-archive client.
- C. REVOKEREMOTEACCESS prevents access through the web backup-archive client.
- D. They can access node data from another node.

Correct Answer: A

Owner: Specifies that you want to grant client owner authority to a user with the node privilege class. A user with client owner authority can access a web backup-archive client through the web client interface and also access their data from another client using the -NODENAME parameter.

QUESTION 2

How does an IBM Spectrum Protect administrator ensure that only the IBM Spectrum Protect server will start scheduled sessions with clients?

- A. SESSIONINITIATION PROMPTED
- B. SESSIONINITIATION CLIENTORSERVER
- C. SESSIONINITIATION SERVERONLY
- D. SESSIONINITIATION POLLING

Correct Answer: C

SESSIONINITiation controls whether the server or the client initiates sessions. The default is that the client initiates sessions.

SERVEROnly specifies that the server does not accept client requests for sessions.

QUESTION 3

There are two servers, server1 and server2. What is enabled when the command, SET DISSIMILARPOLICIES SERVER2 ON is issued on server1?

- A. It enables the use of more than one server1 policy for management of replicated data on server2.

- B. It enables server1 to manage replicated data on server2.
- C. It enables the policies on server2 to be used for management of replicated data from server1.
- D. It enables exporting policies from server1 to server2 so they can be used for management of replicated data.

Correct Answer: C

Use the SET DISSIMILARPOLICIES command to enable the policies that are defined on the target replication server to manage replicated client-node data. If you do not use the policies on the target

replication server, replicated client-node data is managed by policies on the source replication server.

ON specifies that replicated client-node data is managed by the policies that are defined on the target replication server.

Syntax:

QUESTION 4

Which alert type is displayed in the Operations Center when a scheduled node backup fails?

- A. a missed icon
- B. a failed icon
- C. an unprotected icon
- D. an at-risk icon

Correct Answer: D

The Overview page of the Operations Center includes the section: TSM Clients A client is considered to be at risk if a problem occurs during its most recent scheduled backup, or during a backup that starts within a specified time interval. The term backup also includes archive operations for Tivoli Storage Manager for Enterprise Resource Planning clients. Use the information that is shown in the TSM Clients section to check for failed or missed backups and to determine whether backup schedules are running as expected.
