**QUESTION 1**

When should Node Replication be scheduled to run?

- A. when the database backup is running
- B. when no restore clients are running
- C. when no other Admin processes are running
- D. when backup-archive clients are running

Correct Answer: C

Ensure that you are running node replication after client backup.

Complete data deduplication processing before replication processing. Schedule compression after replication.

Figure. Daily schedule when data deduplication and node replication are used

## QUESTION 2

What are the two backup types available to back up NAS file systems using the web client GUI? (Choose two.)

- A. Differential
- B. Incremental
- C. Journal backup
- D. Full backup

E. Partial path

Correct Answer: AD

### QUESTION 3

What is the purpose of the PROTECTSTGPOOL parameter in the DEFINE STGPOOL command?

- A. To identify the ccopypool used when issuing the PROTECT STGPOOL command for a directory container
- B. To identify the target storage pool for client data replication
- C. To specify the target container pool that is used when issuing the PROTECT STGPOOL command
- D. To specify the target container pool that is used to protect a cloud-container storage pool

Correct Answer: C

### QUESTION 4

Which alert type is displayed in the Operations Center when a scheduled node backup fails?

- A. a missed icon
- B. a failed icon
- C. an unprotected icon
- D. an at-risk icon

Correct Answer: D

The Overview page of the Operations Center includes the section: TSM Clients A client is considered to be at risk if a problem occurs during its most recent scheduled backup, or during a backup that starts within a specified time interval. The term backup also includes archive operations for Tivoli Storage Manager for Enterprise Resource Planning clients. Use the information that is shown in the TSM Clients section to check for failed or missed backups and to determine whether backup schedules are running as expected.

**QUESTION 5**

What is the purpose of the option REPLSTATE=ENABLED when running the UPDATE NODE command?

- A. Updates a node definition on the target server by enabling node replication
- B. Enables the replication default rule for the node
- C. Updates a node definition on the source server by enabling node replication
- D. Enables the status report for node replication

Correct Answer: B
