QUESTION 1

What are three key elements of a workload? (Choose three.)

- A. user attributes (types and characteristics)
- B. transaction mix and frequency
- C. test script creation
- D. data security
- E. test environment and configuration

Correct Answer: ABE

QUESTION 2

What does a datapool provide?

- A. one variable for each virtual tester in a schedule
- B. one variable for each test schedule that is run
- C. one record containing one or more variables for each virtual tester in a schedule
- D. one record containing one or more variables for each test schedule that is run

Correct Answer: C

QUESTION 3

What is the main difference between correlated and pooled data?

- A. Correlated data all comes from the same row of the table, while pooled data uses a different line for each request.
- B. A separate copy of correlated data is owned by each test agent, while pooled data is shared across all agents.
- C. Correlated data is varied at runtime, while pooled data is varied at record time.
- D. Correlated data is varied by the server, while pooled data is varied by the client.

Correct Answer: D

QUESTION 4

How does IBM Rational Performance Tester use page names?

- A. only as organizers for page elements

- B. only as tags for data in statistical reports
- C. only as tags for data in execution reports
- D. as page organizers, and as tags for statistical, post run, and execution reports

Correct Answer: D

QUESTION 5

How can you guarantee unique datapool values across a very large test?

- A. have each user draw from a private view of the datapool
- B. wrap when the last row of the datapool is reached
- C. fetch a datapool record only once for each virtual user
- D. segment the datapool so that each agent machine has its own datapool records

Correct Answer: D
