### QUESTION 1

A system administrator needs to identify the most time-intensive web components of a running application, and determine which components are the slowest. The administrator does this from the Tivoli Performance Viewer (TPV) by:

- A. viewing diagnostic trace output.
- B. viewing Servlets Summary Report.
- C. viewing the log file for the web server.
- D. opening Reports tab, Runtime operations, reports.

Correct Answer: B

---

### QUESTION 2

Performance issues have caused several high profile outages in a WebSphere Application Server Network Deployment V8.0 environment. The application developer has isolated the problem to one specific application. To assist with the problem diagnosis a system administrator has been asked to enable the highest level of WebSphere tracing available.

How should the system administrator accomplish this? Enable tracing and set the level to:

- A. \*
- B. all
- C. finest
- D. debug

Correct Answer: B

---

### QUESTION 3

A system administrator needs to create a resource that can be used exclusively by applications running on a specific node.

What configuration setting can be used to limit the visibility of this resource to users on that node?

- A. scope
- B. JNDI name
- C. node group

D. authorization group

Correct Answer: A

---

#### QUESTION 4

A system administrator must deploy a new application that uses Java 2 security. There are several applications installed in the cell that use application security but not Java 2 security. How can the administrator enable support for Java 2 security without affecting the other applications?

- A. Enable Java 2 security at the cell level and grant permissions only to the new application.
- B. Configure a security domain with Java 2 security enabled for the application server that will host the new application.
- C. Configure a security domain for the other applications in the cell with both Java 2 security enabled and application security.
- D. Disable global security and configure a security domain with Java 2 security enabled for the application server that will host the new application.

Correct Answer: B

---

#### QUESTION 5

A system administrator has completed a WebSphere installation using the IBM Installation Manager. Which tool, using the default settings, can the administrator use to generate an HTML file verifying the version of WebSphere installed? Execute the:

- A. postinstall command.
- B. versionInfo command.
- C. genVersionReport command.
- D. Installation Verification Tool (IVT).

Correct Answer: C

---
