**QUESTION 1**

A system administrator is creating a new WebSphere cell consisting of three dedicated machines: ?web server ?deployment manager ?application server node To provide process level failover, the administrator should create a cluster with:

- A. no scaling
- B. vertical scaling
- C. horizontal scaling
- D. horizontal and vertical scaling

Correct Answer: B

**QUESTION 2**

Consider the Exhibit,

a report generated by the IBM Support Assistant (ISA) that reveals a prevailing problem within a WebSphere Application Server environment. What should the administrator do?

- A. Increase the amount of physical memory for the server.
- B. Ensure that all connections taken from the data source are returned to the pool.
- C. Determine why the collection class increases in size and consumes memory.
- D. Modify the application so it uses stateless instead of stateful session beans to conserve the heap.

Correct Answer: C

### QUESTION 3

A system administrator needs to automate management of applications deployed onto IBM WebSphere Application Server Network Deployment V8.0 using scripting. Which administrative objects should the system administrator use?

- A. AdminApp
- B. AdminApplication
- C. AdminTask
- D. AdminConfig
- E. AdminControl

Correct Answer: AC

---

### QUESTION 4

A system administrator needs to enable security auditing.

What additional configuration steps are required before auditing becomes effective?

- A. Configure the types of events that are recorded.
- B. Configure the types of events that are recorded, and configure failure notifications.
- C. Create a set of users or groups mapped to the Admin Security Manager role.
- D. Create a set of users or groups mapped to the Auditor role, and define the notification mechanism.

Correct Answer: D

---

### QUESTION 5

A Java EE application is deployed to a horizontal cluster and makes use of HTTP session objects. The administrator is required to ensure failover of these session objects, and chooses to implement memory-to-memory replication. To maximize chances of successful failover, how should the administrator configure the replication?

- A. Select Entire domain for the number of replicas.
- B. Select Single replica and select the default tuning parameter.
- C. Select Single replica and select "Very high" for the tuning parameter.

D. Specify at least 3 replicas and select "Very high" for the tuning parameter.

Correct Answer: A
