QUESTION 1

Which statement describes a cell in a Network Deployment configuration?

- A. A cell can consist of multiple nodes and node groups.
- B. A cell only contains one node that contains one server.
- C. Nodes and node groups in the cell are administered from the node agent.
- D. Nodes and node groups in the cell are administered from the job manager.

Correct Answer: A

QUESTION 2

How can an administrator configure Web services security?

- A. Customize WS-Security policy set and bindings and attach to Web services.
- B. Configure global security with LDAP authentication and map the configuration to Web services.
- C. Request application developer to use Web Services Security API to achieve Web services security.
- D. Enable the Web Services Metadata Exchange (WS-MetadataExchange) protocol to enable message-level security.

Correct Answer: C

The Web Services Security specification provides a flexible framework for building secure web services to implement message content integrity and confidentiality. The Web Services Security service programming model supports this flexible framework by providing extension points to integrate new token formats, and methods to obtain keys needed for message protection. The application server programming model provides Web Services Security programming application programming interfaces (WSS API) for securing SOAP messages.

Note: WS-Security is a message-level standard that is based on securing SOAP messages through XML digital signature, confidentiality through XML encryption, and credential propagation through security tokens. The Web services security specification defines the facilities for protecting the integrity and confidentiality of a message and provides mechanisms for associating security-related claims with the message.

QUESTION 3

Which Performance Monitoring Infrastructure (PMI) metric is used to monitor the performance of JDBC data sources?

- A. Buffer Pool hit ratios.

- B. Deadlock and Timeout Statistics.
- C. Number of live RDBMS sessions.
- D. Database and connection pool size.

Correct Answer: D

QUESTION 4

An administrator configured Web authentication for a Web module deployed in an application server to protect the URL. After this configuration, application users could not load images that are protected on the web page.

In addition to configuring `com.ibm.wsspi.security.web.webAuthReq` as a JVM custom property, which two property values can an administrator set to resolve the problem? (Choose two.)

- A. lazy
- B. eager
- C. always
- D. transient
- E. persisting

Correct Answer: DE

QUESTION 5

To write a Jython script to stop a running application server, an administrator should use which administrative object?

- A. AdminApp
- B. AdminTask
- C. AdminConfig
- D. AdminControl

Correct Answer: D

You can use the `wsadmin` tool to stop applications.

There are two ways to complete this task. Firstly, you can use the `AdminControl` object to stop the application. Alternatively, you can use the scripts in the `AdminApplication` script library to start, stop, and administer your application configurations.
