### QUESTION 1

A BPM application developer is building a case type. The BPM application developer has a wide range of existing BPM components available and wants to reuse as many of them as possible. Which BPM implementation types can the BPM application developer use to build case type activities?

- A. Script, Subprocess and User Task
- B. Script, System Task and User Task
- C. Linked Process, Subprocess and User Task
- D. Linked Process, Subprocess and System Task

Correct Answer: C

---

### QUESTION 2

A BPM application developer removes an activity from a Business Process Definition (BPD) and creates a new snapshot to be deployed. The process application is already deployed and some of the in-flight instances from the previous snapshot

have a token on the removed activity.

What must the BPM application developer do to move those tokens to the correct activity?

- A. Use the `BPMCreateOfflinePackage` along with the `OrphanTokens` option to create an offline deployment package.
- B. Create a general service to automatically move the tokens once the snapshot is deployed.
- C. Create a section for the `100Custom.xml` file to specify the activity where the tokens should be moved to so they can add it to the Process Server.
- D. Create a policy migration file using the `AdminTask.PBMCleanupOrphanTokens` command. Specify in the file the next activity where those tokens should be moved. Use the policy file to migrate the in-flight instances using the Process Admin console.

Correct Answer: D

---

### QUESTION 3

A BPM Application developer is tasked with exposing a service contained in a BPM Process Application as a web service that may be called by external systems. In the Process Designer, the BPM Application developer has created a new web service, specified the designated service as an operation and has changed the operation name from "untitled" to something meaningful. The web service requires no special namespace or security settings and it is to inherit the default snapshot. What is the next action that the BPM application developer must take?

- A. Publish the web service to the application server.
- B. Take a snapshot and deploy it to the process server.

- C. Edit the WSDL URI to indicate that the default snapshot is the taret.
- D. Generate the data schemas (XSDs) for the inputs and outputs of the service.

Correct Answer: C

---

#### QUESTION 4

A BPM applicaton developer has enabled auto-trackini for a car tre producton and run the update trackini defnitions command in process desiiner. Durini a playback, the BPM applicaton developer is asked to rename the auto-trackini iroup from "at1392376481525" to "treProducton" and run update trackini defnitions aiain. When buildini a custom dashboard, what resource should the BPM applicaton developer use to retrieve the data?

- A. The "treProducton" view for the "treProducton" table.
- B. The "treProducton" view for the "at1392376481525" table.
- C. The "at1392376481525" view for the "treProducton" table.
- D. The "at1392376481525" view for the "at1392376481525" table.

Correct Answer: B

---
