QUESTION 1

How do you create and associate breakdowns on the breakdown source form?

- A. By selecting the 'New' button on the 'Breakdowns' related list
- B. From the 'Additional actions' menu
- C. From the 'Create Breakdowns' related link
- D. By adding multiple 'Facts tables' under the Source tab

Correct Answer: A

A breakdown source is defined as a set of records from a table or database view or as a bucket group. Multiple breakdowns can use the same breakdown source. Breakdown sources specify which unique values, called breakdown elements,

a breakdown contains.

Breakdown source records have a related list that lists the breakdowns that are based on that source. You can create a breakdown by selecting the 'New' button while in this list. The list works like the Indicators list on indicator source

records. Other options in this question do not exist on the breakdown source form. After you create breakdowns that use this source, these breakdowns are listed in the Breakdowns tab.

QUESTION 2

What role is required to create personal targets and thresholds for users who can view an indicator on the Analytics Hub?

- A. pa_viewer
- B. pa_target_admin
- C. pa_threshold_admin
- D. No role

Correct Answer: D

On the Analytics Hub, no roles are required to create personal targets and thresholds. A threshold or a target can be personal or global. A personal threshold or target is visible only to the user that created it. A personal threshold appears as a

light grey dotted line. A personal target appears as a dark line.

Personal thresholds and targets appear only on the Analytics Hub and KPI Details but not on widgets.

targets-thresholds.html

QUESTION 3

How does KPI Signals support notifications?

- A. By forwarding email notifications
- B. By automated signal detection jobs
- C. Through regular back-ups
- D. By setting auto-reply responses

Correct Answer: B

To support notifications, the KPI Signals application provides automated signal detection jobs. For formula indicators, you can modify the jobs to line up with the data collection jobs for the contributing indicators.

The KPI Signals application includes jobs that detect signals automatically. These jobs run so responsible users can be notified of new signals without opening the application. The job for signals on formula indicators requires scheduling.

When you view an indicator in KPI Details and open the KPI Signals panel, that indicator is checked for signals. You, therefore, always have the most up-to-date signals. However, the KPI Signals application also has automated signal

detection jobs. These jobs send notifications about signals to subscribed users without them having the application open.

QUESTION 4

Which of the following statements are true about creating User Experience filters? (Choose three.)

- A. Only users with the admin role can create User Experience filters.
- B. For filters to work in workspaces, you must configure an event handler to apply the filters.
- C. The filter you create in the Now Experience UI Builder is available in all workspaces.
- D. A single filter can be used across all visualisations in a workspace.

Correct Answer: ABD

You can create a single filter for use across all the visualisations in a workspace. Creating User Experience filters requires admin access. The filter you create is available in the workspace in which you created it. For filters to work in workspaces, you must configure an event handler to apply the filters.

QUESTION 5

What does anti-signal indicate in KPI Signals?

- A. No signal has been detected
- B. Long-term stability
- C. Abnormal variation in the scores of a KPI
- D. A workflow has changed

Correct Answer: B
