QUESTION 1

What non-standard WLAN solution attempts to give a longer transmission windows to devices with higher data rates then devise with lower data rates?

- A. AirTime Fairness
- B. Band Steering
- C. ARM
- D. RRM

Correct Answer: A

QUESTION 2

You manage a WLAN with 100 802.11ac access points. All access points are configured to use 80 MHz channels. In a particular BSS, only 40 MHz communications are seen. What is the likely cause of this behavior?

- A. The short guard interval is also enabled.
- B. The clients are all 802.11n STAs or lower
- C. The AP is improperly configured to use only 40 MHz of the 80 MHz allocated bandwidth
- D. All clients implement single spatial stream radios

Correct Answer: C

QUESTION 3

You are configuring an access point to use channel 128. What important fact should be considered about this channel?

- A. It is a 22 MHz channel so it will overlap with the channels above and below it
- B. It is a 2.4 GHz frequency band 40 MHz channel, so it should not be used
- C. It is a channel that is unsupported by most access points
- D. It is a channel that likely requires DFS when used

Correct Answer: D

QUESTION 4

You administer a small WLAN with nine access points. As a small business, you do not run a RADIUS server and use WPA2-Personal for security. Recently, you changed the passphrase for WPA2-Personal in all APs and clients. Several users are now reporting the inability to connect to the network at times and it is constrained to one area of the building. When using a WLAN scanner, you see that the AP covering that area is online and has a strong signal. No other changes have been made to the environment and all access points are the same model. What is the likely problem?

- A. The AP that covers the problem area requires a firmware update
- B. The clients are improperly configured
- C. The AP that covers the problem area has failed
- D. The AP that covers the problem area is improperly configured

Correct Answer: A

QUESTION 5

What statement about the IEEE 802.11-2016 QoS facility is true?

- A. 802.11 QoS is achieved by giving high priority queues a statistical advantage at winning contention.
- B. Four 802.1p user priorities are mapped to eight 802.11 transmit queues.
- C. 802.11 control frames are assigned to the 802.11 EF priority queue.
- D. When the Voice queue has frames awaiting transmission, no data will be transmitted from the Best Effort queue.

Correct Answer: A
