**QUESTION 1**

You build a report to help the sales team understand its performance and the drivers of sales. The team needs to have a single visualization to identify which factors affect success. Which type of visualization should you use?

- A. Key influencers
- B. Funnel chart
- C. QandA
- D. Line and clustered column chart

Correct Answer: A

The key influencers visual helps you understand the factors that drive a metric you're interested in. It analyzes your data, ranks the factors that matter, and displays them as key influencers.

The key influencers visual is a great choice if you want to:

See which factors affect the metric being analyzed. Contrast the relative importance of these factors. For example, do short-term contracts have more impact on churn than long-term contracts?

**QUESTION 2**

You have five sales regions. Each region is assigned a single salesperson.

You have an imported dataset that has a dynamic row-level security (RLS) role named Sales. The Sales role filters sales transaction data by salesperson.

Salespeople must see only the data from their region.

You publish the dataset to powerbi.com, set RLS role membership, and distribute the dataset and related reports to the salespeople.

A salesperson reports that she believes she should see more data.

You need to verify what data the salesperson currently sees.

What should you do?

- A. Use the Test as role option to view data as the salesperson's user account.
- B. Use the Test as role option to view data as the Sales role.
- C. Instruct the salesperson to open the report in Microsoft Power BI Desktop.
- D. Filter the data in the reports to match the intended logic in the filter on the sales transaction table.

Correct Answer: B

### QUESTION 3

You create the following step by using Power Query Editor.

=

```
Table.ReplaceValue(SalesLT_Address,"1318","1319",Replacer.ReplaceText,{"AddressLine 1"})
```

A row has a value of 21318 Lasalle Street in the AddressLine1 column. What will the value be when the step is applied?

- A. 1318
- B. 1319
- C. 21318 Lasalle Street
- D. 21319 Lasalle Street

Correct Answer: D

Replace the text "ur" with the text "or" in the table.

```
Table.ReplaceValue(  
  Table.FromRecords({  
    [a = 1, b = "hello"],  
    [a = 3, b = "world"]  
  }),  
  "ur",  
  "or",  
  Replacer.ReplaceText,  
  {"b"}  
)
```

| a | b     |
|---|-------|
| 1 | hello |
| 3 | world |

Reference: <https://docs.microsoft.com/en-us/powerquery-m/table-replacevalue>

**QUESTION 4**

Which DAX expression should you use to get the ending balances in the balance sheet reports?

- A. CALCULATE ( SUM( BalanceSheet [BalanceAmount] ), DATESQTD( \Date\[Date] ) )
- B. CALCULATE ( SUM( BalanceSheet [BalanceAmount] ), LASTDATE( \Date\[Date] ) )
- C. FIRSTNONBLANK ( \Date\[Date] SUM( BalanceSheet[BalanceAmount] ) )
- D. CALCULATE ( MAX( BalanceSheet[BalanceAmount] ), LASTDATE( \Date\[Date] ) )

Correct Answer: A

Scenario: At least one of the balance sheet reports in the quarterly reporting package must show the ending balances for the quarter, as well as for the previous quarter. DATESQTD returns a table that contains a column of the dates for the quarter to date, in the current context.

Reference: <https://docs.microsoft.com/en-us/dax/datesqtd-function-dax>

**QUESTION 5**

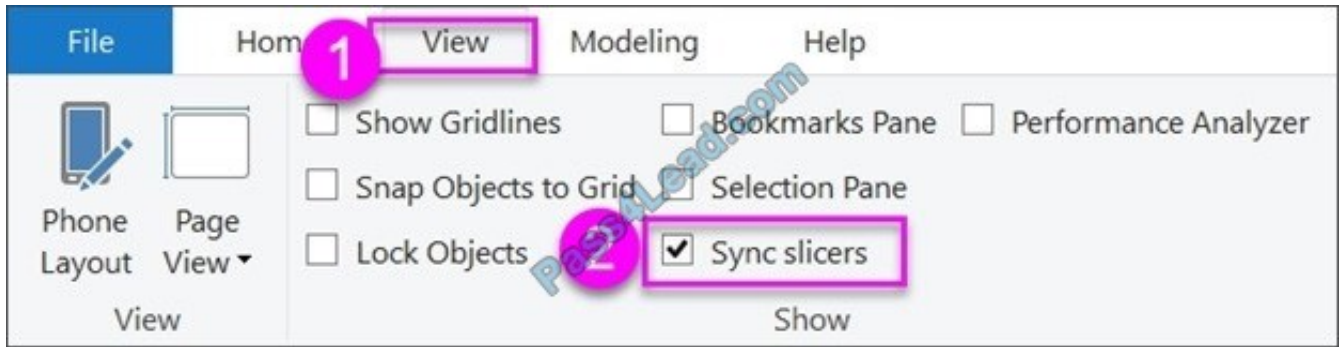

You have a report that contains four pages. Each page contains slicers for the same four fields. Users report that when they select values on a slicer on one page, the visuals are not updated on all the pages. You need to recommend a solution to ensure that users can select a value once to filter the results on all the pages. What are two possible recommendations to achieve this goal? Each correct answer presents a complete solution. NOTE: Each correct selection is worth one point.

- A. Sync the slicers across the pages.
- B. Replace the slicers with page-level filters.
- C. Replace the slicers with visual-level filters.
- D. Create a bookmark for each slicer value.
- E. Replace the slicers with report-level filters.

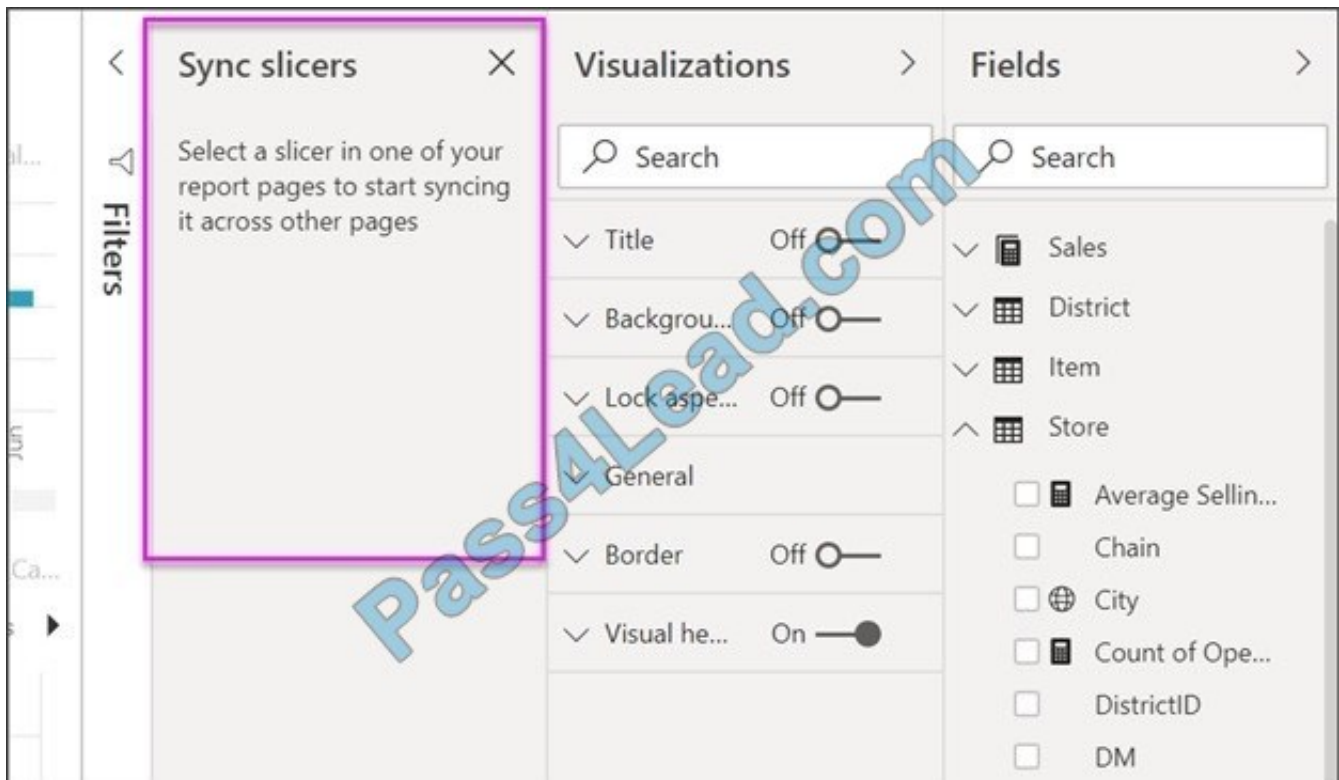

Correct Answer: AE

Add a report-level filter to filter an entire report. The visuals on the active page, and on all pages in the report, change to reflect the new filter. You can sync a slicer and use it on any or all pages in a report.

1. On the Power BI Desktop View menu, select Sync slicers.

The Sync slicers pane appears between the Filters and Visualizations panes.
