QUESTION 1

Which PowerProtect DD technology provides fast and efficient deduplication while minimizing disk access?

A. SISL

B. Cloud Tier

C. Cache Tier

D. DIA

Correct Answer: B

QUESTION 2

An administrator has retained snapshots for a single MTree and is trying to create a new one. An error message is received. What is the reason for the failure?

A. The maximum number of snapshots has been exceeded

B. The DDOS needs to be upgraded

C. The user does not have the permission to retain more snapshots

D. There are not enough snapshot licenses

Correct Answer: A

Explanation: The maximum number of snapshots allowed per MTree is 750. Warnings are sent when the number of snapshots per MTree reaches 90% of the maximum allowed number (from 675 to 749 snapshots), and an alert is generated

when the maximum number is reached. To clear the warning, expire snapshots and then run the file system cleaning operation.

Note: To identify an MTree that is nearing the maximum number of snapshots, check the Snapshots panel of the MTree page regarding viewing MTree snapshot information.

QUESTION 3

A PowerProtect DD backup administrator wants to delegate some Operations to their Monitoring and Control team. The administrator wants to add a user to the Monitoring and Control team with limited access to only check the health of the PowerProtect DD appliance.

Which role must be applied to the new user?

A. Backup Operator

B. Limited Admin

C. User

D. Tenant Admin

Correct Answer: C

Explanation:

The User role provides read-only access to monitor activities and operations.

QUESTION 4

A PowerProtect DD appliance has been installed at a company\\'s location for several months and has reached a steady state. As a best practice, at what percentage of disk utilization should action be taken?

A. 60%

B. 70%

C. 80%

D. 95%

Correct Answer: C

QUESTION 5

A backup administrator is tasked with monitoring PowerProtect DD capacity metrics. The administrator is backing up 2 ?? of data daily with a reduction rate at 5x. After data reduction, subsequent full backups compress down to 100 GB.

The initial backup requires 400 GB with a 10 percent increase in the data each day. Each incremental backup is 200 GB. After data reduction, each incremental backup is 20 GB.

What is the weekly burn rate (GB) after six daily incremental backups and one weekly backup?

A. 200

B. 220

C. 400

D. 440

Correct Answer: A
