QUESTION 3

An organization is using a hybrid cloud for services. Services are designed to use Load Balancers. Orchestration workflows are designed so that services instances are placed in multiple fault domains. Why are services designed in such a manner?

A. Minimize impact of security breech

B. Mitigate risk to service availability

C. Mitigate risk to service integrity

D. Minimize impact of governance policies

Correct Answer: B

QUESTION 4

A cloud architect is helping a company with a new service design process. The architect is concerned that the company may see delays in problem resolution that can impact customer satisfaction. What did the architect observe that may have led to this concern?

A. Virtual, service-centric IT organizational structure

B. Single private cloud deployment for services

C. Siloed, domain-centric IT organization structure

D. Decreased number of touch points

Correct Answer: C

QUESTION 5

Your company is an application service provider that hosts customer applications and data in your data center. The entire infrastructure is client-server based and you have begun to assess the risk of moving your web applications to a cloud-

based infrastructure. During this phase you are required to provide the value of corporate assets involved.

How should you assess these corporate assets?

A. Use realistic valuations

B. Create a valuation that is information-asset centric

C. Use original purchase values

D. Create values based on accelerated depreciation

Correct Answer: A
