QUESTION 1

An AR provides multiple statistics query commands. SIP message statistics can be queried in all views,

- A. TRUE
- B. FALSE

Correct Answer: B

QUESTION 2

Which of the following statements is CORRECT about networking schemes in which AR voice routers function as local gateways?

- A. When the gateway on the central node works properly, the AR router provides the IP phone registration function.
- B. When the gateway on the central node works properly, call requests from all IP phones are first sent to the AR router for call routing processing.
- C. When the gateway on the central node works properly, call requests from all POTS phones directly connected to the AR router are first sent to the AR router for call routing processing.
- D. Phone numbers of local SIP users need to be configured on the AR router.

Correct Answer: C

QUESTION 3

About a multi-node centralized network, which of the following statements are CORRECT? (Multiple Choice)

- A. All users have their services configured and controlled in a unified manner on the central node.
- B. In normal conditions, the local node does not accept registration requests from SIP users.
- C. POTS users on the local node register with the central node directly.
- D. On the central node, you can view the license information about the local node.

Correct Answer: AB

QUESTION 4

Which of the following statements is INCORRECT as regard to the CDR system?

- A. The unified gateway provides an open and secure interface for a third-party billing system or center to obtain CDRs.
- B. BMU provides the CDR query function.

C. Original CDRs are stored in the CDR pool of the unified gateway.

D. After CDRs are obtained from the CDRServer, the CDRs in the current folder are deleted and saved to the backup folder.

Correct Answer: A

QUESTION 5
