---

**QUESTION 2**

Which of the following are true about SDN? (Choose all that apply.)

- A. In the SDN architecture, the underlying switches need to provide only the most basic and simple functions.
- B. SDN is applicable to cloud computing providers and enterprises facing substantially increasing workloads/
- C. SDN's forwarding-control separation architectures standardize and simplify network devices.
- D. SDN cannot implement flexible and centralized control and cloudfield application awareness.

Correct Answer: BC

---

**QUESTION 3**

The OpenStack architecture comprises which of the following components? (Choose all that apply.)

- A. Nova
- B. Neutron
- C. Cinder
- D. NetMatrix

Correct Answer: ABC

---

**QUESTION 4**

Which of the following statements about SNMP are not true? (Choose all that apply.)

- A. SNMP is an application layer protocol that requires reliable TCP at the transport layer to provide services.
- B. SNMP is used to manage information transmitted between the two points, making it easy for administrators to preform operations.
- C. SNMP uses the client/server model.
- D. There are three SNMP protocol versions. Currently, only SNMPv3 supports community name-based security mechanisms.

Correct Answer: BC
