QUESTION 1

A customer has several Oracle databases with different workload profiles residing on old HUS systems. The customer wants to consolidate workloads on a new VSP G800 system to increase database performance and to reduce costs.

Which configuration would you use to accomplish this task?

A. Put all of the databases in a single HDT pool.

B. Put each database in its own HDT pool.

C. Put databases with the same workload profile together in their own HDT pool.

D. Put all database tablespaces and indexes in the first HDT pool, all redo logs in the second HDT pool, and all undo logs in a third HDT pool.

Correct Answer: A

QUESTION 2

A customer wants to add a new flash-based tier to an existing HDT pool. You refer to the Tier properties chart to determine if the workload in a disk-based HDT pool is a good candidate for adding a new and higher flash tier.

In this scenario, what does the chart tell you?

A. The utilization line starts at a low level and gradually climbs to a high spike at the extreme right-hand side.

B. The utilization line starts at a medium level on the left side and fails away slowly.

C. The utilization line stays at a high level until half way across the chart then drops sharply.

D. The utilization line starts at a high level on the left side then drops away sharply.

Correct Answer: A

QUESTION 3

Which two UNIX commands provide metrics about disk device I/O activity? (Choose two.)

A. perfmon

B. iogen

C. iostat

D. sar

Correct Answer: CD

QUESTION 4

You are planning for a performance upgrade for a transaction application.

Which three metrics are necessary to determine the required back-end storage configuration in this scenario? (Choose three.)

A. cache read hit ratio

B. read/write ratio

C. transfer rates

D. queue depth

E. IOPS

Correct Answer: ABE

QUESTION 5

For a VSP G1000 system serving a mission critical interactive workload, which two statements are true about VSD failover? (Choose two.)

A. The VSD receiving the workload of a failed VSD is not pre-determined.

B. Providing reserved capacity to accommodate failure is a requirement when planning for capacity for normal operations.

C. The workload of a failed VSD board always transfers to its redundant partner VSD board.

D. The workload of a failed VSD board is dynamically redistributed among surviving VSD boards.

Correct Answer: BC
