QUESTION 1

Which statement best describes the purpose of regression testing in software development?

- A. Regression testing is limited in that it tests the isolated functionality without the interdependencies of other software.
- B. Regression testing is used to verify system-wide business functionality, performance, and security.
- C. Regression testing is used to evaluate the end user experience and get real world feedback into the team to address issues
- D. Regression testing is used to ensure that new functionality does not result in another fault somewhere else in the software.

Correct Answer: B

QUESTION 2

Why is the concept of Continuous Integration and Testing important to the Agile conversation?

- A. Merely increasing the pace of development without addressing the full software development lifecycle will cause bottlenecks in other aspects of the lifecycle.
- B. It increases the total number of sprints required to complete a software project and will reduce delivery costs and increase quality.
- C. It gives organizations the ability to align business processes and functional testing with performance and security testing to ensure better quality.
- D. Simply reducing the total number of sprints required to complete a software project will reduce delivery costs and increase quality.

Correct Answer: B

QUESTION 3
